

Supplementary Figure 1

Supplementary Figure 1 related to Figure 1

Phenotype analysis of transplantable neuroblastoma 9464D and 975A2 mouse models

Representative flow-cytometry histograms of MHC class I cell surface expression in IFN γ -treated (+IFN γ) and untreated (baseline) 9464D and 975A2 tumor cells. Isotype-matched negative control antibody (IgG) is shown as grey line. Bars represent the MFI of MHC class I cell surface expression. Levels of significance for comparison between samples were determined by two-tailed Student's t test. Statistically significant P values are shown.
