

Supplementary Figure 3 – Immunological and cytological characteristics of ascites from cluster-poor and cluster-rich patients. In cluster-poor or rich patients, (A) white blood cells, (B) macrophages, (C) lymphocytes and (D) neutrophils are counted and compared. (E) Percentage of neoplastic cells group comparison. (F) Number of cells in the biggest cluster group comparison. Mean $\pm$ SEM. * $p < 0.05$, *** $p < 0.001$.
