

Supplemental Figure 1

A. Association of outcome of survival to hospital discharge with favorable neurologic outcome with systolic blood pressure 0-6 post-arrest. **The optimal cut point is at the 7th percentile adjusted for age, sex and height (sensitivity 66%, specificity 57%). Area under the curve is 0.64.**

B. Association of outcome of survival to hospital discharge with favorable neurologic outcome with diastolic blood pressure 0-6 post-arrest. **The optimal cut point is at the 49th percentile adjusted for age, sex and height (sensitivity 60%, specificity 61%). Area under the curve is 0.64.**
