

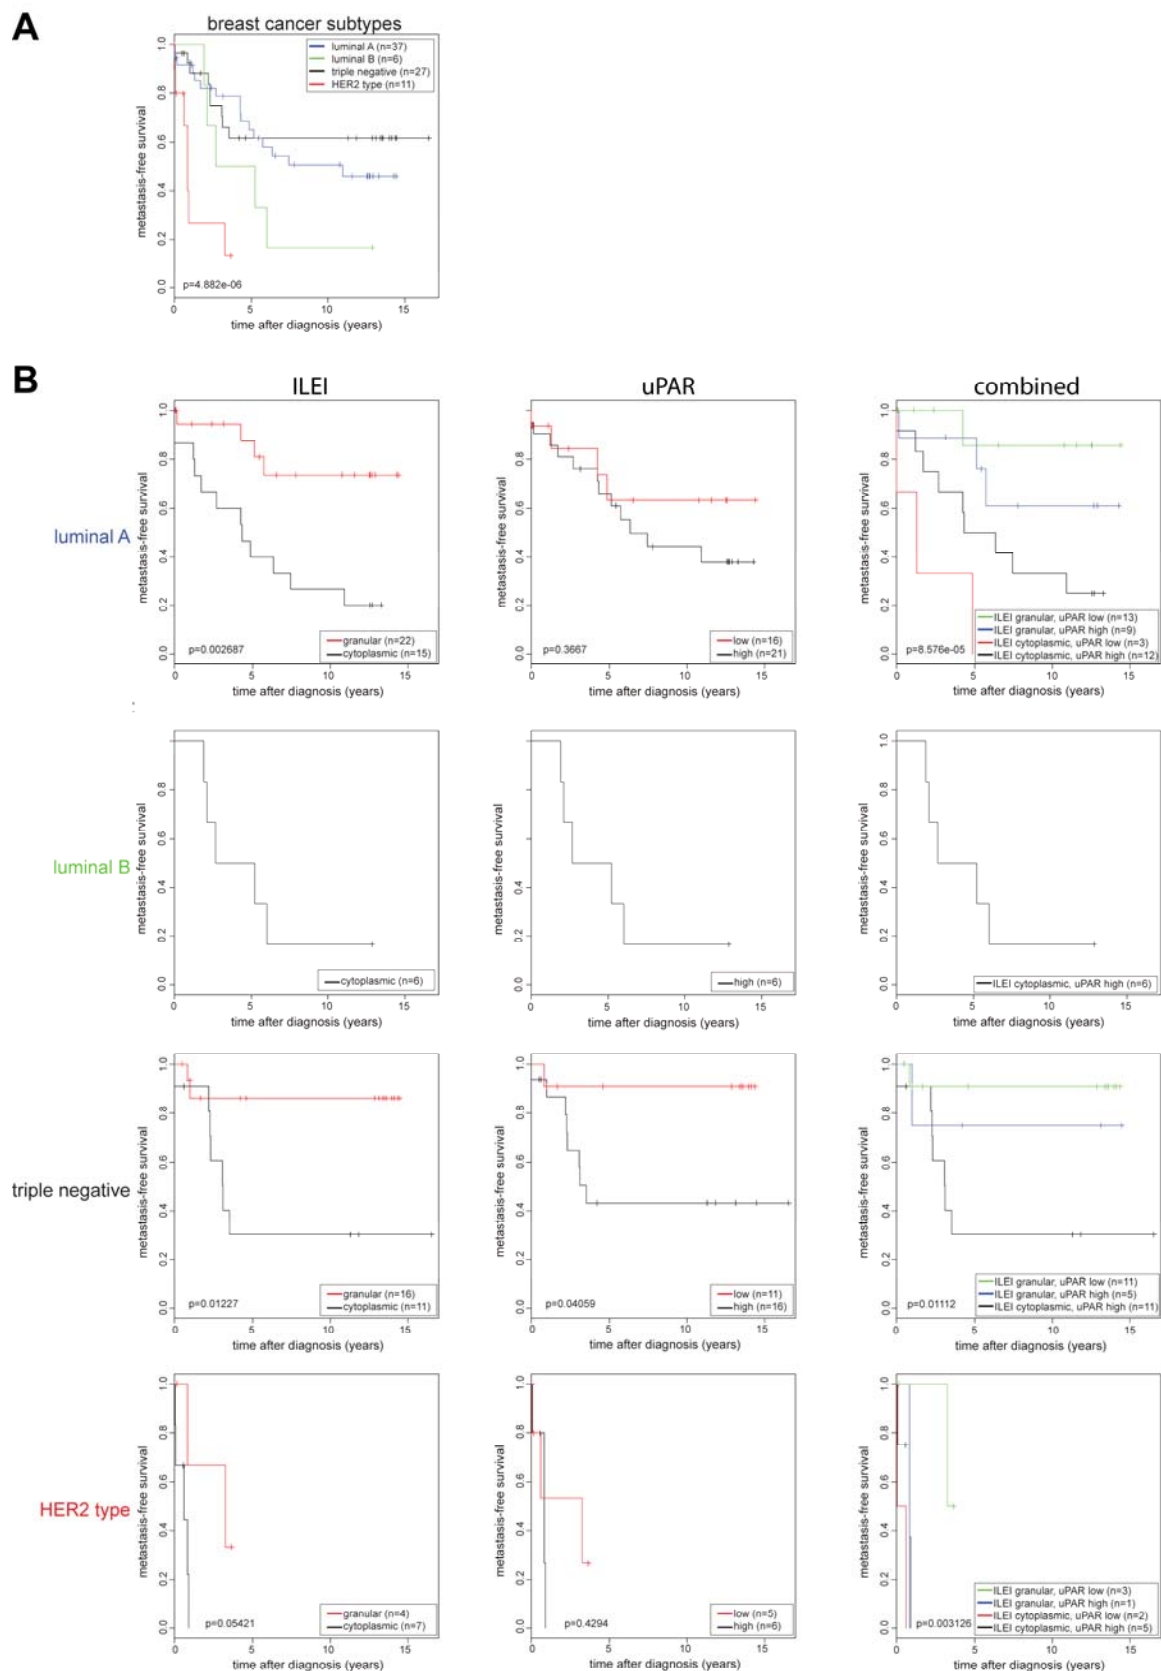

Figure S6

Figure S6. Analysis on the prognostic power of ILEI, uPAR and a combined marker analysis in human breast cancer subtypes. (A) Kaplan-Meier plots depicting metastasis-free survival of patients evaluated for the four major breast cancer subtypes, (B) Kaplan-Meier plots depicting metastasis-free survival of patients of each breast cancer subtype evaluated for ILEI localization (left panels), tumor-cell associated uPAR expression (middle panels) and a combined analysis of the two markers (right panels).
