

Additional File 5: Figure S3. Related to Fig. 2. Increased vascularization is associated with distant relapse.

(A) Representative views of CD31 immunostaining in either controls (left) and cases (right) (Scale bar = 100um). (B) Boxplot showing the percentage of CD31+ areas normalized on stroma proportion according to recurrence status and BC molecular subtype (N=104, 52 controls and 52 cases). P-value is from Wilcoxon test. (AI 7,1 Mo)
