

Supplemental Figure S3: Long-term repression of the *TRPM4* locus in C42B cells. RT-qPCR of endogenous *TRPM4* mRNA levels 4d (transient) and 14d (long-term) after co-transfection of plasmids expressing four gRNAs targeted to the *TRPM4* promoter and the indicated epi-dCas9 fusions individually or in combination with D3A-dCas9 and D3L. *TRPM4* mRNA levels were compared to dCas9 with no ED (n = 2; mean $\pm$ SEM).
