

A

B

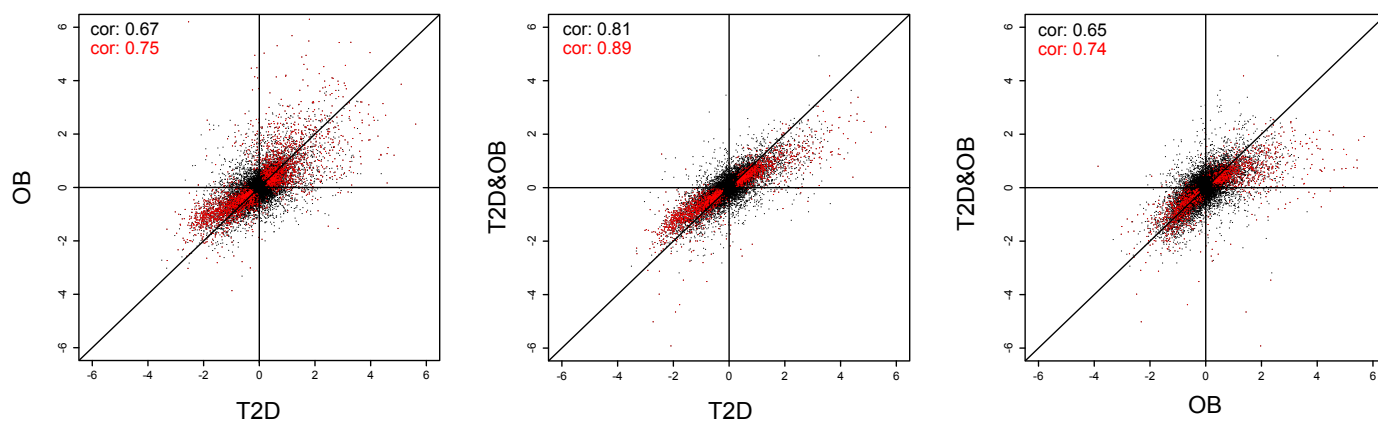

Figure S2. (A) Volcano plots showing gene fold changes and q-values for the three groups (T2D, OB, and T2D&OB) compared to controls. Significantly differentially expressed genes ($q < 0.05$) are highlighted in blue and red. One extreme data point in the T2D&OB group (log₂-fold change of -5 and $q = 7.9 \times 10^{-12}$) is not shown. **(B)** Scatterplots of log₂-fold changes (vs controls). Pearson correlation is shown in black for all genes and in red for genes that were significant in at least one of the compared groups ($q < 0.05$).
