

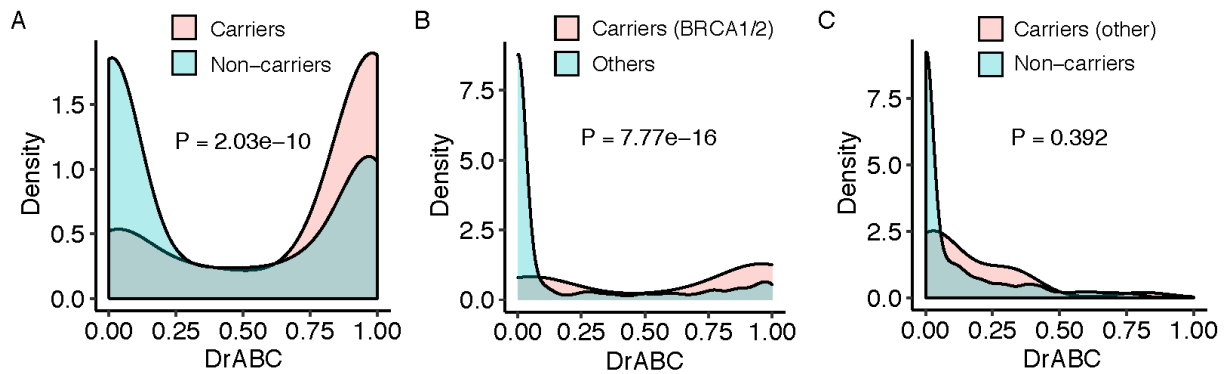

Fig. S8. The Distribution of the Predicted Probabilities in Non-carriers and CPGs-carriers by the DrABC Model.

A-B) The possibilities generated by DrABC were distributed differently between the non-carriers and the CPGs-carriers **(A)** or *BRCA1/2*-carriers **(B)**. **C)** However, they were indistinguishable between the non-carriers and the patients carrying GPVs in CPGs other than *BRCA1/2*.
