Figure S2. Type III IFN production is induced in plasmacytoid dendritic cells (pDCs) and pDC-B cell co-cultures from healthy blood donors stimulated with RNA containing immune complexes (RNA-IC) Protein levels of IFN-λ1/3 in supernatants of pDC, B cells or pDC-B cell co-cultures after 20 h of RNA-IC or mock stimulation. Boxplots show medians with interquartile range, based on four healthy blood donors.
