

A.**B.****C.****D.****E.**

Figure S1: shows the corresponding full length western blot images from the original figure (Figure 5A) of published manuscript (Mussa et. al. 2021) . Expression was determined for the following stem cell differentiation markers: (A) AGG, (B) FSP-1, (C) CD44, (D) ALP, and (E) β -actin (loading control) in differentiated PDGFR α -positive (PDGFR α +) cells and compared with the positive control (Fibroblast) and negative control (iMSc).
