

Protein-protein interactions of the up-regulated proteins in HCM versus control hearts using the proteomics data. Each node represents one protein, proteins involved in enriched extracellular matrix organization are shown in red nodes and proteins involved in enriched muscle structure development are shown in the blue nodes.

Protein-protein interactions of the down-regulated proteins in HCM versus control hearts using the proteomics data. Each node represents one protein, proteins involved in enriched small molecular metabolism are shown in red nodes and proteins involved in enriched ATP metabolic process are shown in the blue nodes.
