

Supp. Fig. 6. (A-B) Expression of Zic-r.a and at 2 cells stage and 36 cells stage. (C-E) Tbx6 expression in (C) 64-cell (D) early gastrula and (E) larval tail. (F) Ebf expression at gastrula stage. Tbx1/10, Tbx6 (ab), Myh3 and Ef1α (control), in mixed RNA of all 7 stages of blastogenesis, infertile (Bl), gastrula (Ga) and at larval stage (La). Tbx6 sequence stretched over 2 contigs in the assembly of the transcriptome (ab), hence the in situ probe was designed containing parts of both.
