

Beyond Palmer: A Topographic Classification of Non-Palmer Triangular Fibrocartilage Complex Injuries

Electronic supplementary material

Supplementary material

Fig. S1 Diagnostic and management algorithm for non-Palmer TFCC lesions. After lesion characterization with MRI, MR arthrography, or CT arthrography, non-Palmer lesions are classified as central (NP-1), capsular (NP-2), or combined (NP-3) patterns, each with distinct arthroscopic treatment implications.
