

Supplement Figure 1

Supplement Figure 1. NT3P75-2 overexpression could inhibit astrocyte activation after TBI.
(A) Representative images of GFAP staining in different groups (Sham, TBI, GFP-BMSCs, NT3-BMSCs, NT3P75-2-BMSCs). (Scale Bar, 100 μ m)
(B) Quantification analysis of GFAP positive cells in each groups (n.s. no significance, ###P<0.001, ***P<0.001 by one-way ANOVA followed by Bonferroni's Multiple Comparison Test, n = 4).
