

Fig.S1 Delta, Omicron BA.1, and BA.2 differentially infect hiPSC-CMs

Human iPSC-CMs were exposed to Delta, Omicron BA.1, BA.2. and were immunostained for NP. **(A)** Graph shows %NP⁺ hiPSC-CMs at 48hpi with MOI of 1 n=4. **(B)** Graph shows %NP⁺ hiPSC-CMs at 24 and 48hpi with MOI of 0.1 n=3. **(C)** Fluorescence images of infected hiPSC-CMs, NP in Red, DAPI in blue. Data are presented as mean±SEM, and n refer to biological replicates. Scale bar = 500µm.
