

Additional file 2: Figure S2

Additional file 2: Figure S 2: Dynamic of clusters in the 41 study infants within the first year of life. Figure indicates the cluster profile for each infant within the first year of life. Clusters are colored according to the color key on the bottom right. Each number indicates a sample and the corresponding cluster. The absence of a number indicates a missing sample. Vertical lines represent the time point of the PCV vaccination (first and second dose). Boxplots show the Jensen-Shannon distance (log transformed) between each pair of clusters within each infant.
