

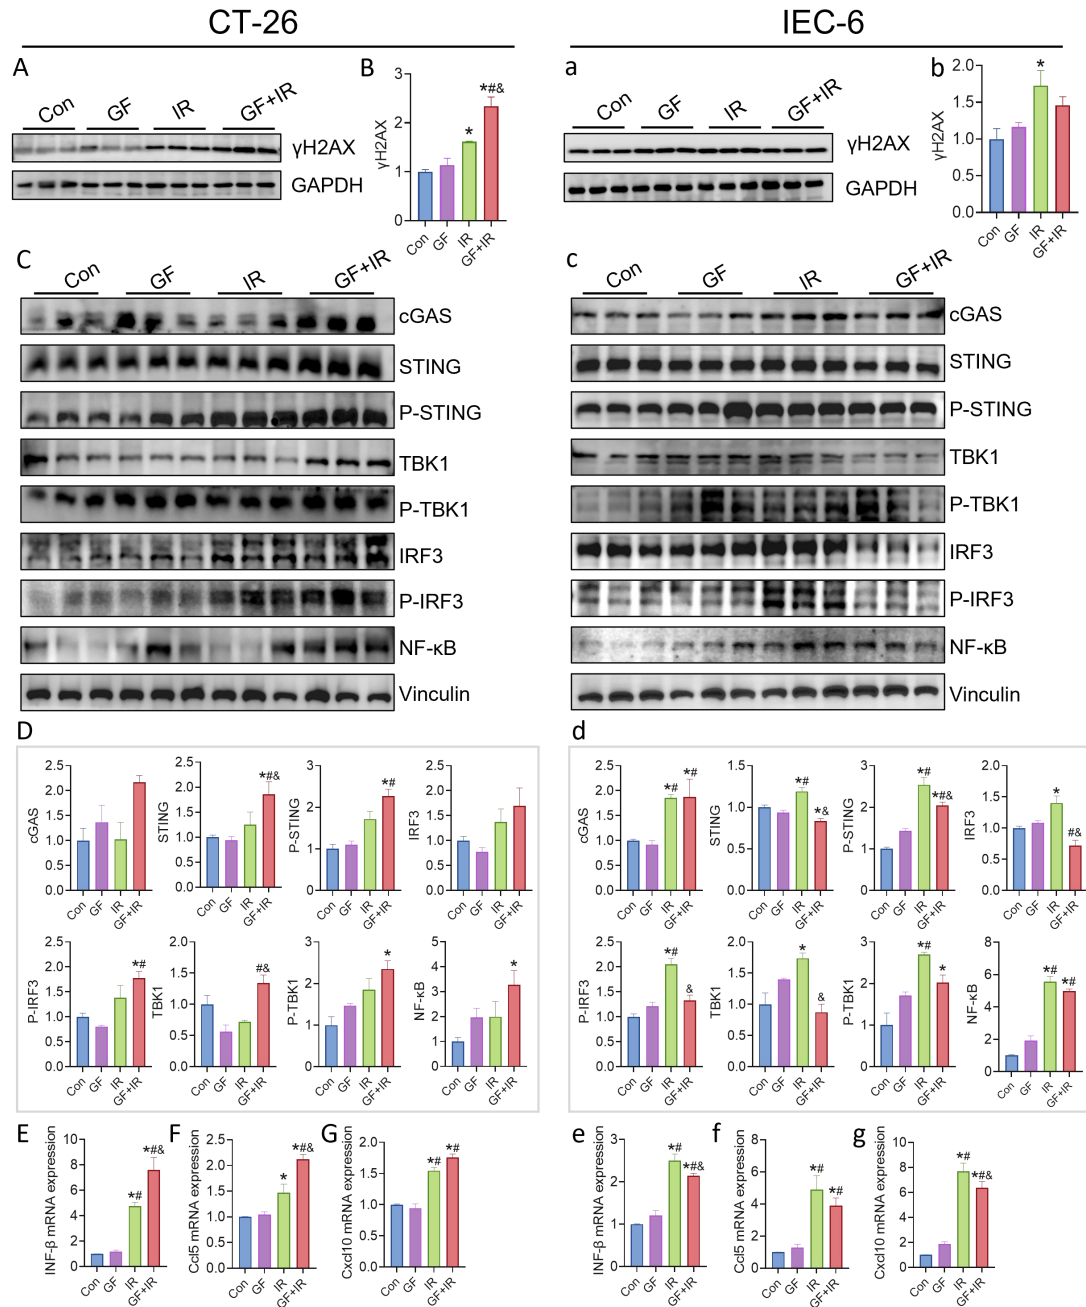

Fig. S1. The effects of GR on IR-induced activation of the cGAS/STING pathway in CT-26 and IEC-6 cells. In CT-26 cells: (A,B) Representative Western blot of γ H2AX and quantification of protein levels. (C,D) Representative Western blot of cGAS/STING-associated proteins and quantification of protein levels. (E-G) Relative mRNA expression of IFN- β , Ccl5, and Cxcl10. (a-g) Corresponding results in IEC-6 cells. $P < 0.05$ ($n = 3$), * compared with Con; # compared with GR; & compared with IR.
