

Additional file 2: RE-AIM evaluation framework domains

RE-AIM Framework domain	Intervention domain	Indicator	Data source
Reach Penetration and participation	Health professional education	- Number of staff undertaking each education module - Characteristics of staff participating	Staff education records
	ED screening	% people screened with SCOFF at intake - Characteristics of people in each study period	Medical record audit
	ED care pathway	- Proportion of people referred to dietitian for further screening and pathway - Proportion of people with ED offered care pathway components	Medical record audit
Adoption Willingness to initiate quality changes	Health professional education	- Number of staff undertaking education - Attitudes and engagement of staff for ED education	- Staff education records - Staff interviews
	ED screening	Attitudes and engagement of intake and ward staff for SCOFF screening	Staff interviews
	ED care pathway	Attitudes and engagement of staff for ED care pathway	Staff interviews
Implementation Uptake of the quality changes	Health professional education	- Number of staff education sessions - Staff reported implementation of learnings	- Staff education records - Staff interviews
	ED screening	% people screened with SCOFF at intake - Proportion SCOFF ≥ 2 or preadmission ED referred for assessment or care. - Proportion identified as having a diagnosis or at high-risk of AN, BN or OSFED at admission or later in hospital stay. - Person perception of SCOFF implementation at intake - Staff perception of SCOFF implementation at intake - Number of screening adaptations and rationale for changes - Facilitators and challenges for implementation	- Medical record audit - Consumer interviews - Staff interviews - Staff interviews - Staff interviews
	ED care pathway	- Proportion of care pathway elements implemented for each person - Dietetic assessment and management - ED support plan (written or verbal) - Monitoring charted (weight, biochemistry, blood pressure) - Provision Supportive Meal Therapy by nurses or allied health - Staff awareness, involvement and perceptions of pathway elements and implementation. - Consumer awareness and acceptability of ED care pathway elements - Number of pathway adaptations and rationale for changes - Facilitators and challenges for implementation	- Medical record audit - Staff interviews - Consumer interviews - Staff interviews - Staff interviews
Effectiveness Impact on outcomes	Health professional education	Change in knowledge and self-efficacy in working with people with EDs	Staff interviews
	ED screening	- Staff perception of effectiveness for ED identification - Person perception of effectiveness for ED identification - Correlation between SCOFF screening outcomes and ED diagnosis	- Staff interviews - Consumer interviews - Medical record audit
	ED care pathway	- Person engagement, satisfaction and perception of effectiveness of individual pathway elements for them and perceived changes in ED related health - Staff perception of effectiveness of care pathway on consumer outcomes - Staff perception for long term sustainability of pathway - Proportion of documented hypoglycaemia, electrolyte imbalances and clinically significant changes in blood pressure - Proportion of reported or sentinel events including MET calls, and Code Blue calls. - Changes in body weight over the admission	- Consumer interviews - Medical record audit - Staff interviews - Medical record audit
