Figure S4. *In vitro* inhibition of replication comparing human and laboratory strains of BDV-1

Inhibition-of-replication longitudinal assay (60 days) *in vitro*, testing the antiviral efficacy of different amounts of amantadine ($0 \mu\text{g mL}^{-1}$ to $1.2 \mu\text{g mL}^{-1}$) against BDV-1 human strain Hu-H1 compared to laboratory adapted str. V of animal origin, using the same cell type (human oligodendroglial [OL] cells).
