

Supplementary figure 1. Flowcytometric gating of cell subsets.

Shown are the gating strategies of: **(A)** the 4 conventional DC subsets: ie, two CD1a-positive subsets (top plots); CD11c^{hi}CD1a^{int} and CD11c^{int}CD1a^{hi} and two CD1a-negative subsets (bottom plots); CD11c⁺ CD14⁻ and CD11c⁺ CD14⁺ (both pre-gated to exclude CD1a⁺ cells). **(B)** plasmacytoid DC. **(C)** Myeloid derived suppressor cells (right plot), pre-gated as HLA-DR⁺ and lineage (CD3/CD19/CD56) negative. **(D)** CTLA-4, PD-1 and HLA-DR, ICOS expression on CD4⁺ T cells (top) and CD8⁺ T cells (bottom). **(E)** CD25^{hi}FoxP3⁺ Tregs (pre-gated as CD3⁺CD4⁺).
