

Additional File 1. Vascular leakage was observed early in the retina of EAE mice.

Signs of vascular leakage (ALB; arrows) in the retina were observed at both 9 and 11 dpi in EAE mice compared to healthy controls but were not seen at earlier or later time points.

DPI: days post immunisation, SVP: superficial vascular plexus, IVP: intermediate vascular plexus, DVP: deep vascular plexus, EAE: experimental autoimmune encephalomyelitis, ALB: albumin.

Retinal pathology in experimental optic neuritis is characterized by retrograde degeneration and gliosis.

Praveena Manogaran^{*1,2}, Marijana Samardzija, Anaïs Nura Schäd, Carla Andrea Wicki, Christine Walker-Egger, Markus Rudin, Christian Grimm, Sven Schippling.
