

Supplementary Figure 1. Body weight and survival data in pooled early versus delayed SC groups. (A) Body weight loss at 72 h relative to baseline body weight in pooled early SC (6 h + 12 h) and pooled delayed SC (18 h + 24 h) groups. Data are presented as mean $\pm$ SD. (B) Kaplan–Meier survival curves over the 72-h experimental period in pooled early SC (6 h + 12 h) and pooled delayed SC (18 h + 24 h) groups.
