

Supplementary data

Supplementary Figure S1. Analysis of marker genes under LOV treatment.

(A, B) Expression patterns of *DR5_{pro}::GUS* (A) and *ARR5_{pro}::GUS* (B) in adventitious root founder cells at 2 days, adRP at 3 to 4 days, and adRAM at 5 to 6 days treated with 30 nM LOV. adRFC, adventitious root founder cells; adRP, adventitious root primordium; adRAM, adventitious root apical meristem.

Scale bars, 50 μm.
