

Figure S4

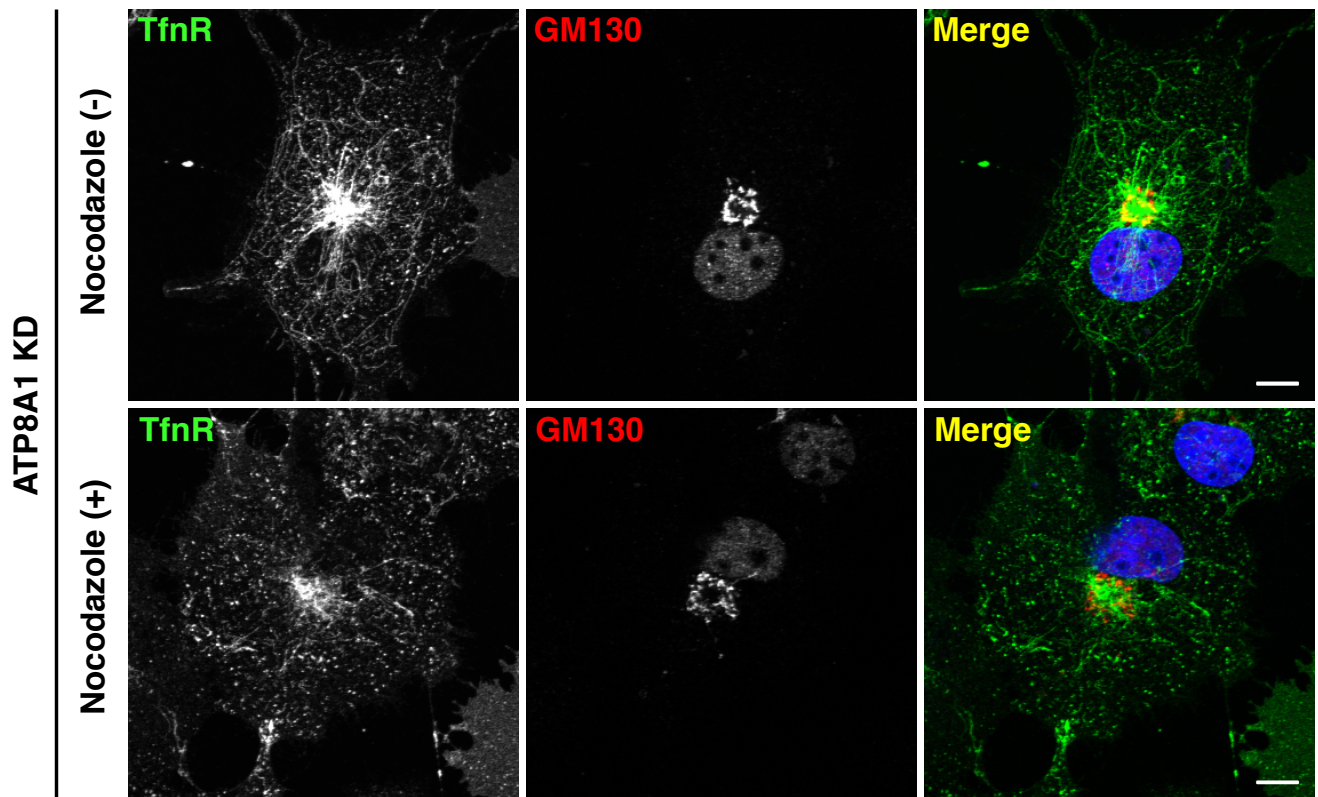

Figure S4. TfnR-positive tubules in ATP8A1-depleted cells depends on the integrity of microtubules. COS-1 cells were treated with ATP8A1 siRNA1 for 72 h. Cells were then incubated in medium with 10 μ M nocodazole for 5 min, washed, fixed, and stained for TfnR and GM130. The images represent the maximum intensity z-projection of four confocal slices. Scale bars, 10 μ m.
