

Source data for Figure 2A. The red box indicates the cropped image used in the manuscript figure. Left panel: WB using anti-p62 was imaged at 800 nm. Right panel: the same WB using anti-GAPDH was imaged at 700 nm as a loading control.

Source data for Figure 2G. Left panel: WB using anti-p62 was imaged at 800 nm. Right panel: the same WB using anti-GAPDH was imaged at 700 nm as a loading control.

Source data for Figure 2H. Left panel: WB using anti-active caspase 3 was imaged at 700 nm. Right panel: membrane was stripped and reblotted using anti-GAPDH and imaged at 700 nm as a loading control.
