|   | Label       | How would you rate these student claims? Below are some claims that prior students offered as suppo... : How Relevant is the claim to the PRO-Regulation perspective?- Nanogenomics could someday allow people to change any genetic characteristic (hair, skin, eye color) that they would like. See evidenceSupporting evidence?• Some note that such procedures are already being considered: "It's technically feasible and it can be done," says Mark Hughes, a pioneer of the PGD process and director of Genesis Genetics Institute, a large fertility laboratory in Detroit. However, he adds that 'no legitimate lab would get into it and, if they did, they'd be ostracized.'" See source • Nanotechnology may simply be an additional tool for achieving such aims, as suggested by this author: "Nanorobots could change your physical appearance. They could be programmed to perform cosmetic surgery, rearranging your atoms to change your ears, nose, eye color or any other physical feature you wish to alter." See sourceNegating evidence?• At the end of the article referencing the potential of nanorobots above, the author states that, in general, "Many nanotechnology experts feel that these applications are well outside the realm of possibility, at least for the foreseeable future." See source |  |  |

| Label | <p>How would you rate these student claims? Below are some claims that prior students offered as suppo... : How Relevant is the claim to the PRO-Regulation perspective?-People already use (and our laws allow them to use) medical technologies to change how they look (through plastic surgery) and even their gender--use of nanogenomics for human enhancement is basically the same thing. See evidenceSupporting evidence?• Dr. Gregor Wolbring reminds us that "the ever increasing appearance of internal and external enhancements of the human body – driven by lucrative and big business sport disciplines on one hand and the medical technology to deal with injuries on the other – enables a culture of increasing demand for, and acceptance of, improvements to and modifications of the human body (structure, function, abilities) beyond its species-typical boundaries." See source• With regard to the potential of nanotechnology to enhance humans, the President's Council on Bioethics said, "These technologies promise great benefits for humanity—such as increased productivity and creativity, longer lives, more serenity, stronger bodies and minds." See source• In 2000, David Resnick noted that scientists at a conference predicted that "within a few years researchers will develop techniques that can be used to enhance human traits." See sourceNegating evidence?• In light of recent developments in genetic research, scientists have been asked to make changes in things like</p> |  |

|                                 | skin color and muscle mass of patients. While this probably could be accomplished with current technology, Dr. Christopher Evans and Dr. Scott McIvor say, "the possibility of harm would be difficult to justify for a cosmetic procedure and, more important, genetic enhancement of healthy people raises a host of difficult ethical questions." See source• "The American Medical Association's Council on Ethical and Judicial Affairs issued a policy statement in 1994 stating that efforts to enhance "desirable" characteristics through the insertion of a modified or additional gene, or efforts to "improve" complex human traits, are contrary not only to the ethical tradition of medicine but also to the egalitarian values of our society." See sourceDid you find additional evidence to support or negate this claim? Please submit it below under "What's missing?" |            |    |      |

|                                 | Label              | How would you rate these student claims? Below are some claims that prior students offered as suppo... : How Relevant is the claim to the PRO-Regulation perspective?- Nanogenomics differs from prior human enhancement technologies because it involves genetic changes that could be passed on to one's children. See evidenceSupporting evidence?• Scientists believe that every human has about 25,000 genes per cell. A mutation, or change, in any one of these genes can result in a disease, physical disability, or shortened life span. These mutations can be passed from one generation to another, inherited just like a mother's red hair or a father's brown eyes. Negating evidence?• David King of Human Genetics Alert says, "Currently, genetic engineering is only applied to non-reproductive cells (this is known as 'gene therapy') in order to treat diseases in a single patient, rather than in all their descendants. Gene therapy is still very unsuccessful, and we are often told that the prospect of reproductive genetic engineering is remote." See sourceDid you find additional evidence to support or negate this claim? Please submit it below under "What's missing?" |  |  |

| Label | <p>How would you rate these student claims? Below are some claims that prior students offered as suppo... : How Relevant is the claim to the PRO-Regulation perspective?-When it comes to human enhancement, a "mistake" made using nanogenomic technology is much more serious than mistakes made using other technologies. See evidenceSupporting evidence?• An article by the Richmond Journal of Law and Technology reminds us that "[t]he extraordinarily small size of nanoproducts results in unusual properties that go beyond the normal law of physics, which makes working with them quite unpredictable." See source• A recent article in the Medical Journal of Australia states that "safety regulation of nanotherapeutics may present unique risk assessment challenges, given the novelty and variety of products, high mobility and reactivity of engineered nanoparticles, and blurring of the diagnostic and therapeutic classifications of "medicines" and "medical devices". See sourceNegating evidence?• The Law Journal of Medicine and Ethics ran an article in 2006 which stated, "risk often provokes the precautionary principle, a guide for human activities to prevent harm to human health and the environment. It is not a new principle and is often a formula for doing nothing in its strictest form or, in its active form it means choosing a less risky alternative and taking responsibility for any potential risks." That is to say, the risks of mistakes with nanotechnology are</p> |  |

| Label | <p>How would you rate these student claims? Below are some claims that prior students offered as suppo... : How Relevant is the claim to the PRO-Regulation perspective?-Heavy regulation of nanogenomics will stifle and slow down research and development in nanogenomics. See evidence Supporting evidence?• In his 2007 paper, Patrick Lin looks at both sides of the issue: "On one side, experts argue that nanomaterials, which are making their way into the marketplace today, are possibly harmful to consumers and the environment, so stronger and new laws are needed to ensure they are safe. On the other side, different experts argue that more regulation will slow down the pace of business and innovation in nanotechnology." See source• Howard Schachman, Biology Professor at the University of California at Berkeley, posits that, "scientists temperamentally and culturally are skeptical about the legitimacy of rules; instinctively they tend to oppose regulations as an unnecessary burden impeding research." He adds that they "express frustration over those government regulations which are imposed as a result of political pressures, provide very little benefit, appear ill-advised or poorly crafted, are costly and do indeed impede scientific research." Negating evidence?• According to an Arizona State University study, "leading U.S. scientists in nanotechnology believe regulations are most urgently needed in the areas of surveillance and privacy, human</p> |  |  |

|                                 |                    | enhancement, medicine and the environment."See source• Norris Alderson, who was on the FDA task force for nanomedicine says, "We reached a number of conclusions. Perhaps the most important is that, for now, this technology is really no different than any other new technology that would be incorporated into FDA products. So with that in mind, we feel comfortable, if you will, using our present regulatory framework. However, we felt there is need for guidance to help this industry as it moves forward. We recognized a need for additional information in various areas, such as biosafety. FDA and other agencies are working together on that. But for now, we just do not see the need for regulations written specifically for nano-engineered materials in the products FDA regulates."See sourceDid you find additional evidence to support or negate this claim? | Label | <p>How would you rate these student claims? Below are some claims that prior students offered as suppo... : How Relevant is the claim to the PRO-Regulation perspective?-Heavy regulation will prevent the creative work that is necessary for life-saving breakthroughs. See evidence Supporting evidence?• Dr Patrick Lin, director of The Nanoethics Group says, "We need to find a reasonable balance that responsibly promotes innovation in nanotechnology while at the same time safeguards EHS [environmental health and safety] interests." See source• Eric Berger, science reporter for the Houston Chronicle, says "by finding areas in which nanotechnology may pose even a theoretical threat, they're also opening the door to more stringent regulation, which at some point may strangle the development of small, cash-strapped companies that are trying to commercialize innovative nano ideas." See source• According to a 2010 article on thescientist.com, "Biomedical science as it is practiced today in the United States in academic institutions is largely an enterprise, and a very large enterprise, supported with public funds from the national government. Due to the real risks for lapses in safety or ethics and the appropriate expectation for some form of accountability, research supported by money from the National Institutes of Health (NIH) or other federal sources is expected to comply with rules and regulations intended to minimize the chances for breaches in safety or ethics or</p> |  |  |

| <p>Label</p> | <p>How would you rate these student claims? Below are some claims that prior students offered as suppo... : How Relevant is the claim to the PRO-Regulation perspective?-At the nano-scale, materials change their properties: For example, elements that don't conduct electricity at normal scales may suddenly do so at the nano-level. See evidenceSupporting evidence?• A National Citizens' Technology Forum Report on Nanotechnology states that "A critically important aspect of manipulating matter at the nanoscale is that a material's properties can...exhibit new properties, such as electrical conductivity, elasticity, enhanced strength, different colors, and different reactivity, when compared to the same material at "normal" scale. This means...that using materials at the nanoscale can mean the creation of new materials that can be beneficial in many ways. It also means that we cannot assume that materials that are safe and harmless at normal scales are necessarily safe and harmless at the nanoscale."See source• Andrew Maynard, head of the University of Michigan Risk Science Center, offers an example: "Gold is an inert, yellowish metal—everyone knows this." He continues, "But form gold into particles just a few nanometers across, and everything changes—the metal does the equivalent of transforming from a cat into a dog. Instead of appearing yellowish in color, the particles now appear red, and become highly chemically active."See</p> |  |  |

| Label | <p>How would you rate these student claims? Below are some claims that prior students offered as suppo... : How Relevant is the claim to the PRO-Regulation perspective?- Nanogenomics will someday let people choose the genetic make up of their children. See evidenceSupporting evidence?• As Jeff Steinberg of LA's Fertility Institutes says, "This is cosmetic medicine...Others are frightened by the criticism but we have no problems with it." Trait selection in babies "is a service," says Dr. Steinberg, and "[w]e intend to offer it soon." See source• Stanford University's Cross-cultural Rhetoric Project acknowledges that "PGD (Preimplantation Genetic Diagnosis) has been used to create 'Designer Babies'. 'Designer baby' is a term used to refer to a baby whose genetic makeup has been artificially selected by genetic engineering. The procedure used to create these genetically modified babies ensures the presence or absence of particular genes or characteristics." See sourceNegating evidence?• Geneticist and blogger, Minerva reminds us that "the opportunity to alter a relatively "simple" trait such as height will be available long before we figure out the soup of probable genetic determinants of "empathy", so physical trait enhancement will surely precede character trait enhancement." See source• According to a 2009 Science Daily article, "A new study by researchers at NYU Langone Medical Center found a high desire for additional genetic testing among consumers for life</p> |  |  |

| <p>Label</p> | <p>How would you rate these student claims? Below are some claims that prior students offered as suppo... : How Relevant is the claim to the PRO-Regulation perspective?-Slowing down nanogenomic research will cost zillions of lives as people waiting for this research will die of their genetic disorders. See evidenceSupporting evidence?• "Among the long term objectives of the NIH initiative are goals such as being able to use nanoparticles to seek out cancer cells before tumors grow, remove and/ or replace "broken" parts of cells or cell mechanisms with miniature, molecular-sized biological "machines", and use similar "machines" as pumps or robots to deliver medicines when and where needed within the body. All of these ideas are feasible based on present technology." Subsequently, delaying this research is risking the lives of the people who could benefit from these treatments. See source• In 2005, a CNN article said that, "by attaching a chemotherapeutic drug to manmade nanoparticles, the team of researchers at the University of Michigan were able to smuggle it inside cancerous cells, delaying the growth of tumors in mice by up to 30 days -- the equivalent of three years in a human. Professor of biologic nanotechnology James Baker, who led the research, said that the treatment might eventually turn cancer into a chronic but treatable condition." See source• According to John Miller, a lawyer specializing in law and technology, "a lack of agency preparation could take the form of</p> |  |  |

|                                 | unnecessary delays in patient access. Inadequate resources combined with a growing caseload, an inefficient regulatory structure, a lack of expertise, or FDA reviewers exercising extreme caution could all result in the FDA taking excessive amounts of time to review new technologies."See sourceNegating evidence?• John Miller also points out that "If a lack of agency preparation results in hasty approval of dangerous therapies and a failure to effectively monitor clinical research, patients could be exposed to a significant risk of harm during clinical trials."See source• In the Australian and New Zealand Journal of Public Health, researchers wrote that the "regulatory regimes do not adequately capture the potential risks associated with this new technology. Concerns have arisen due to preliminary evidence suggesting that some engineered nanoparticles may display undesirable toxicological properties, presenting potential risks to human and environmental health and safety."See sourceDid you find additional evidence to support or negate this claim? |                     | Label       | How would you rate these student claims? Below are some claims that prior students offered as suppo... : How Relevant is the claim to the PRO-Regulation perspective?- Nanogenomic technology is being used to diagnose (not just treat) diseases. See evidenceSupporting evidence?• According to the magazine New Scientist, Dr. Christine Keating and her colleagues at Pennsylvania State University have created a chip consisting of a series of nanowires coated with DNA sequences that match those from disease-causing bacteria or viruses that can be used to diagnose a variety of medical conditions. See source • A National Citizens' Technology Forum Report on Nanotechnology states that nanotechnology may lead to "dramatic diagnostic improvements", including using "nanoscale particles to dramatically enhance physicians' ability to detect very minute amounts of specific disease-related molecules in the body." See sourceNegating evidence?• None foundDid you find additional evidence to support or negate this claim? Please submit it below under "What's missing?" |       |         |

|                                 | Label       | How would you rate these student claims? Below are some claims that prior students offered as suppo... : How Accurately is the claim stated?- Nanogenomics could someday allow people to change any genetic characteristic (hair, skin, eye color) that they would like. See evidenceSupporting evidence?• Some note that such procedures are already being considered: "It's technically feasible and it can be done," says Mark Hughes, a pioneer of the PGD process and director of Genesis Genetics Institute, a large fertility laboratory in Detroit. However, he adds that 'no legitimate lab would get into it and, if they did, they'd be ostracized.'" See source • Nanotechnology may simply be an additional tool for achieving such aims, as suggested by this author: "Nanorobots could change your physical appearance. They could be programmed to perform cosmetic surgery, rearranging your atoms to change your ears, nose, eye color or any other physical feature you wish to alter." See sourceNegating evidence?• At the end of the article referencing the potential of nanorobots above, the author states that, in general, "Many nanotechnology experts feel that these applications are well outside the realm of possibility, at least for the foreseeable future." | <p>Label</p> | <p>How would you rate these student claims? Below are some claims that prior students offered as suppo... : How Accurately is the claim stated?-People already use (and our laws allow them to use) medical technologies to change how they look (through plastic surgery) and even their gender--use of nanogenomics for human enhancement is basically the same thing. See evidenceSupporting evidence?• Dr. Gregor Wolbring reminds us that "the ever increasing appearance of internal and external enhancements of the human body – driven by lucrative and big business sport disciplines on one hand and the medical technology to deal with injuries on the other – enables a culture of increasing demand for, and acceptance of, improvements to and modifications of the human body (structure, function, abilities) beyond its species-typical boundaries." See source• With regard to the potential of nanotechnology to enhance humans, the President's Council on Bioethics said, "These technologies promise great benefits for humanity—such as increased productivity and creativity, longer lives, more serenity, stronger bodies and minds." See source• In 2000, David Resnick noted that scientists at a conference predicted that "within a few years researchers will develop techniques that can be used to enhance human traits." See sourceNegating evidence?• In light of recent developments in genetic research, scientists have been asked to make changes in things like skin color and muscle mass of patients.</p> |  |  |

|                                 | Label              | How would you rate these student claims? Below are some claims that prior students offered as suppo... : How Accurately is the claim stated?- Nanogenomics differs from prior human enhancement technologies because it involves genetic changes that could be passed on to one's children.See evidenceSupporting evidence?• Scientists believe that every human has about 25,000 genes per cell. A mutation, or change, in any one of these genes can result in a disease, physical disability, or shortened life span. These mutations can be passed from one generation to another, inherited just like a mother's red hair or a father's brown eyes.Negating evidence?• David King of Human Genetics Alert says, "Currently, genetic engineering is only applied to non-reproductive cells (this is known as 'gene therapy') in order to treat diseases in a single patient, rather than in all their descendants. Gene therapy is still very unsuccessful, and we are often told that the prospect of reproductive genetic engineering is remote."See sourceDid you find additional evidence to support or negate this claim? | <p>Label</p> | <p>How would you rate these student claims? Below are some claims that prior students offered as suppo... : How Accurately is the claim stated?-When it comes to human enhancement, a "mistake" made using nanogenomic technology is much more serious than mistakes made using other technologies. See evidenceSupporting evidence?• An article by the Richmond Journal of Law and Technology reminds us that "[t]he extraordinarily small size of nanoproducts results in unusual properties that go beyond the normal law of physics, which makes working with them quite unpredictable." See source• A recent article in the Medical Journal of Australia states that "safety regulation of nanotherapeutics may present unique risk assessment challenges, given the novelty and variety of products, high mobility and reactivity of engineered nanoparticles, and blurring of the diagnostic and therapeutic classifications of "medicines" and "medical devices". See sourceNegating evidence?• The Law Journal of Medicine and Ethics ran an article in 2006 which stated, "risk often provokes the precautionary principle, a guide for human activities to prevent harm to human health and the environment. It is not a new principle and is often a formula for doing nothing in its strictest form or, in its active form it means choosing a less risky alternative and taking responsibility for any potential risks." That is to say, the risks of mistakes with nanotechnology are no different than the risks we take in other</p> |  |

| <p>Label</p> | <p>How would you rate these student claims? Below are some claims that prior students offered as suppo... : How Accurately is the claim stated?-Heavy regulation of nanogenomics will stifle and slow down research and development in nanogenomics. See evidenceSupporting evidence?• In his 2007 paper, Patrick Lin looks at both sides of the issue: "On one side, experts argue that nanomaterials, which are making their way into the marketplace today, are possibly harmful to consumers and the environment, so stronger and new laws are needed to ensure they are safe. On the other side, different experts argue that more regulation will slow down the pace of business and innovation in nanotechnology." See source• Howard Schachman, Biology Professor at the University of California at Berkeley, posits that, "scientists temperamentally and culturally are skeptical about the legitimacy of rules; instinctively they tend to oppose regulations as an unnecessary burden impeding research." He adds that they "express frustration over those government regulations which are imposed as a result of political pressures, provide very little benefit, appear ill-advised or poorly crafted, are costly and do indeed impede scientific research." Negating evidence?• According to an Arizona State University study, "leading U.S. scientists in nanotechnology believe regulations are most urgently needed in the areas of surveillance and privacy, human enhancement, medicine and the</p> |  |  |

|                                 |                    | environment."See source• Norris Alderson, who was on the FDA task force for nanomedicine says, "We reached a number of conclusions. Perhaps the most important is that, for now, this technology is really no different than any other new technology that would be incorporated into FDA products. So with that in mind, we feel comfortable, if you will, using our present regulatory framework. However, we felt there is need for guidance to help this industry as it moves forward. We recognized a need for additional information in various areas, such as biosafety. FDA and other agencies are working together on that. But for now, we just do not see the need for regulations written specifically for nano-engineered materials in the products FDA regulates."See sourceDid you find additional evidence to support or negate this claim? | Label | <p>How would you rate these student claims? Below are some claims that prior students offered as suppo... : How Accurately is the claim stated?-Heavy regulation will prevent the creative work that is necessary for life-saving breakthroughs. See evidence Supporting evidence?• Dr Patrick Lin, director of The Nanoethics Group says, "We need to find a reasonable balance that responsibly promotes innovation in nanotechnology while at the same time safeguards EHS [environmental health and safety] interests." See source• Eric Berger, science reporter for the Houston Chronicle, says "by finding areas in which nanotechnology may pose even a theoretical threat, they're also opening the door to more stringent regulation, which at some point may strangle the development of small, cash-strapped companies that are trying to commercialize innovative nano ideas." See source• According to a 2010 article on thescientist.com, "Biomedical science as it is practiced today in the United States in academic institutions is largely an enterprise, and a very large enterprise, supported with public funds from the national government. Due to the real risks for lapses in safety or ethics and the appropriate expectation for some form of accountability, research supported by money from the National Institutes of Health (NIH) or other federal sources is expected to comply with rules and regulations intended to minimize the chances for breaches in safety or ethics or for inappropriate use of research funding.</p> |  |  |

| <p>Label</p> | <p>How would you rate these student claims? Below are some claims that prior students offered as suppo... : How Accurately is the claim stated?-At the nano-scale, materials change their properties: For example, elements that don't conduct electricity at normal scales may suddenly do so at the nano-level. See evidenceSupporting evidence?• A National Citizens' Technology Forum Report on Nanotechnology states that "A critically important aspect of manipulating matter at the nanoscale is that a material's properties can...exhibit new properties, such as electrical conductivity, elasticity, enhanced strength, different colors, and different reactivity, when compared to the same material at "normal" scale. This means...that using materials at the nanoscale can mean the creation of new materials that can be beneficial in many ways. It also means that we cannot assume that materials that are safe and harmless at normal scales are necessarily safe and harmless at the nanoscale."See source• Andrew Maynard, head of the University of Michigan Risk Science Center, offers an example: "Gold is an inert, yellowish metal—everyone knows this." He continues, "But form gold into particles just a few nanometers across, and everything changes—the metal does the equivalent of transforming from a cat into a dog. Instead of appearing yellowish in color, the particles now appear red, and become highly chemically active."See sourceNegating evidence?• None</p> |  |  |

| Label | <p>How would you rate these student claims? Below are some claims that prior students offered as suppo... : How Accurately is the claim stated?- Nanogenomics will someday let people choose the genetic make up of their children. See evidence Supporting evidence? • As Jeff Steinberg of LA's Fertility Institutes says, "This is cosmetic medicine... Others are frightened by the criticism but we have no problems with it." Trait selection in babies "is a service," says Dr. Steinberg, and "[w]e intend to offer it soon." See source • Stanford University's Cross-cultural Rhetoric Project acknowledges that "PGD (Preimplantation Genetic Diagnosis) has been used to create 'Designer Babies'." "Designer baby" is a term used to refer to a baby whose genetic makeup has been artificially selected by genetic engineering. The procedure used to create these genetically modified babies ensures the presence or absence of particular genes or characteristics." See source Negating evidence? • Geneticist and blogger, Minerva reminds us that "the opportunity to alter a relatively "simple" trait such as height will be available long before we figure out the soup of probable genetic determinants of "empathy", so physical trait enhancement will surely precede character trait enhancement." See source • According to a 2009 Science Daily article, "A new study by researchers at NYU Langone Medical Center found a high desire for additional genetic testing among consumers for life altering and threatening medical</p> |  |  |

| <p>Label</p> | <p>How would you rate these student claims? Below are some claims that prior students offered as suppo... : How Accurately is the claim stated?-Slowing down nanogenomic research will cost zillions of lives as people waiting for this research will die of their genetic disorders. See evidence Supporting evidence?• "Among the long term objectives of the NIH initiative are goals such as being able to use nanoparticles to seek out cancer cells before tumors grow, remove and/ or replace "broken" parts of cells or cell mechanisms with miniature, molecular-sized biological "machines", and use similar "machines" as pumps or robots to deliver medicines when and where needed within the body. All of these ideas are feasible based on present technology." Subsequently, delaying this research is risking the lives of the people who could benefit from these treatments. See source• In 2005, a CNN article said that, "by attaching a chemotherapeutic drug to manmade nanoparticles, the team of researchers at the University of Michigan were able to smuggle it inside cancerous cells, delaying the growth of tumors in mice by up to 30 days -- the equivalent of three years in a human. Professor of biologic nanotechnology James Baker, who led the research, said that the treatment might eventually turn cancer into a chronic but treatable condition." See source• According to John Miller, a lawyer specializing in law and technology, "a lack of agency preparation could take the form of unnecessary delays in patient access.</p> |  |  |

|                                 | Inadequate resources combined with a growing caseload, an inefficient regulatory structure, a lack of expertise, or FDA reviewers exercising extreme caution could all result in the FDA taking excessive amounts of time to review new technologies."See sourceNegating evidence?• John Miller also points out that "If a lack of agency preparation results in hasty approval of dangerous therapies and a failure to effectively monitor clinical research, patients could be exposed to a significant risk of harm during clinical trials."See source• In the Australian and New Zealand Journal of Public Health, researchers wrote that the "regulatory regimes do not adequately capture the potential risks associated with this new technology. Concerns have arisen due to preliminary evidence suggesting that some engineered nanoparticles may display undesirable toxicological properties, presenting potential risks to human and environmental health and safety."See sourceDid you find additional evidence to support or negate this claim? Please submit it below under "What's missing?" |            |    |      |

|                                 | Label       | How would you rate these student claims? Below are some claims that prior students offered as suppo... : How Accurately is the claim stated?- Nanogenomic technology is being used to diagnose (not just treat) diseases. See evidenceSupporting evidence?• According to the magazine New Scientist, Dr. Christine Keating and her colleagues at Pennsylvania State University have created a chip consisting of a series of nanowires coated with DNA sequences that match those from disease-causing bacteria or viruses that can be used to diagnose a variety of medical conditions. See source • A National Citizens' Technology Forum Report on Nanotechnology states that nanotechnology may lead to "dramatic diagnostic improvements", including using "nanoscale particles to dramatically enhance physicians' ability to detect very minute amounts of specific disease-related molecules in the body." See sourceNegating evidence?• None foundDid you find additional evidence to support or negate this claim? Please submit it below under "What's missing?" |       |         |

|                                 | Label       | How would you rate these student claims? Below are some claims that prior students offered as suppo... : How Typical is evidence for the claim?- Nanogenomics could someday allow people to change any genetic characteristic (hair, skin, eye color) that they would like. See evidenceSupporting evidence?• Some note that such procedures are already being considered: "It's technically feasible and it can be done," says Mark Hughes, a pioneer of the PGD process and director of Genesis Genetics Institute, a large fertility laboratory in Detroit. However, he adds that 'no legitimate lab would get into it and, if they did, they'd be ostracized.'" See source • Nanotechnology may simply be an additional tool for achieving such aims, as suggested by this author: "Nanorobots could change your physical appearance. They could be programmed to perform cosmetic surgery, rearranging your atoms to change your ears, nose, eye color or any other physical feature you wish to alter." See sourceNegating evidence?• At the end of the article referencing the potential of nanorobots above, the author states that, in general, "Many nanotechnology experts feel that these applications are well outside the realm of possibility, at least for the foreseeable future." | <p>Label</p> | <p>How would you rate these student claims? Below are some claims that prior students offered as suppo... : How Typical is evidence for the claim?-People already use (and our laws allow them to use) medical technologies to change how they look (through plastic surgery) and even their gender--use of nanogenomics for human enhancement is basically the same thing. See evidenceSupporting evidence?• Dr. Gregor Wolbring reminds us that "the ever increasing appearance of internal and external enhancements of the human body – driven by lucrative and big business sport disciplines on one hand and the medical technology to deal with injuries on the other – enables a culture of increasing demand for, and acceptance of, improvements to and modifications of the human body (structure, function, abilities) beyond its species-typical boundaries." See source• With regard to the potential of nanotechnology to enhance humans, the President's Council on Bioethics said, "These technologies promise great benefits for humanity—such as increased productivity and creativity, longer lives, more serenity, stronger bodies and minds." See source• In 2000, David Resnick noted that scientists at a conference predicted that "within a few years researchers will develop techniques that can be used to enhance human traits." See sourceNegating evidence?• In light of recent developments in genetic research, scientists have been asked to make changes in things like skin color and muscle mass of patients.</p> |  |  |

|                                 | Label              | How would you rate these student claims? Below are some claims that prior students offered as suppo... : How Typical is evidence for the claim?- Nanogenomics differs from prior human enhancement technologies because it involves genetic changes that could be passed on to one's children.See evidenceSupporting evidence?• Scientists believe that every human has about 25,000 genes per cell. A mutation, or change, in any one of these genes can result in a disease, physical disability, or shortened life span. These mutations can be passed from one generation to another, inherited just like a mother's red hair or a father's brown eyes.Negating evidence?• David King of Human Genetics Alert says, "Currently, genetic engineering is only applied to non-reproductive cells (this is known as 'gene therapy') in order to treat diseases in a single patient, rather than in all their descendants. Gene therapy is still very unsuccessful, and we are often told that the prospect of reproductive genetic engineering is remote."See sourceDid you find additional evidence to support or negate this claim? Please submit it below under "What's missing?" |   |      |

| <p>Label</p> | <p>How would you rate these student claims? Below are some claims that prior students offered as suppo... : How Typical is evidence for the claim?-When it comes to human enhancement, a "mistake" made using nanogenomic technology is much more serious than mistakes made using other technologies. See evidenceSupporting evidence?• An article by the Richmond Journal of Law and Technology reminds us that "[t]he extraordinarily small size of nanoproducts results in unusual properties that go beyond the normal law of physics, which makes working with them quite unpredictable." See source• A recent article in the Medical Journal of Australia states that "safety regulation of nanotherapeutics may present unique risk assessment challenges, given the novelty and variety of products, high mobility and reactivity of engineered nanoparticles, and blurring of the diagnostic and therapeutic classifications of "medicines" and "medical devices". See sourceNegating evidence?• The Law Journal of Medicine and Ethics ran an article in 2006 which stated, "risk often provokes the precautionary principle, a guide for human activities to prevent harm to human health and the environment. It is not a new principle and is often a formula for doing nothing in its strictest form or, in its active form it means choosing a less risky alternative and taking responsibility for any potential risks." That is to say, the risks of mistakes with nanotechnology are no different than the risks we take in other</p> |  |

| <p>Label</p> | <p>How would you rate these student claims? Below are some claims that prior students offered as suppo... : How Typical is evidence for the claim?-Heavy regulation of nanogenomics will stifle and slow down research and development in nanogenomics. See evidenceSupporting evidence?• In his 2007 paper, Patrick Lin looks at both sides of the issue: "On one side, experts argue that nanomaterials, which are making their way into the marketplace today, are possibly harmful to consumers and the environment, so stronger and new laws are needed to ensure they are safe. On the other side, different experts argue that more regulation will slow down the pace of business and innovation in nanotechnology." See source• Howard Schachman, Biology Professor at the University of California at Berkeley, posits that, "scientists temperamentally and culturally are skeptical about the legitimacy of rules; instinctively they tend to oppose regulations as an unnecessary burden impeding research." He adds that they "express frustration over those government regulations which are imposed as a result of political pressures, provide very little benefit, appear ill-advised or poorly crafted, are costly and do indeed impede scientific research." Negating evidence?• According to an Arizona State University study, "leading U.S. scientists in nanotechnology believe regulations are most urgently needed in the areas of surveillance and privacy, human enhancement, medicine and the</p> |  |  |

|                                 |                    | environment."See source• Norris Alderson, who was on the FDA task force for nanomedicine says, "We reached a number of conclusions. Perhaps the most important is that, for now, this technology is really no different than any other new technology that would be incorporated into FDA products. So with that in mind, we feel comfortable, if you will, using our present regulatory framework. However, we felt there is need for guidance to help this industry as it moves forward. We recognized a need for additional information in various areas, such as biosafety. FDA and other agencies are working together on that. But for now, we just do not see the need for regulations written specifically for nano-engineered materials in the products FDA regulates."See sourceDid you find additional evidence to support or negate this claim? | Label | <p>How would you rate these student claims? Below are some claims that prior students offered as suppo... : How Typical is evidence for the claim?-Heavy regulation will prevent the creative work that is necessary for life-saving breakthroughs. See evidence Supporting evidence?• Dr Patrick Lin, director of The Nanoethics Group says, "We need to find a reasonable balance that responsibly promotes innovation in nanotechnology while at the same time safeguards EHS [environmental health and safety] interests." See source• Eric Berger, science reporter for the Houston Chronicle, says "by finding areas in which nanotechnology may pose even a theoretical threat, they're also opening the door to more stringent regulation, which at some point may strangle the development of small, cash-strapped companies that are trying to commercialize innovative nano ideas." See source• According to a 2010 article on thescientist.com, "Biomedical science as it is practiced today in the United States in academic institutions is largely an enterprise, and a very large enterprise, supported with public funds from the national government. Due to the real risks for lapses in safety or ethics and the appropriate expectation for some form of accountability, research supported by money from the National Institutes of Health (NIH) or other federal sources is expected to comply with rules and regulations intended to minimize the chances for breaches in safety or ethics or for inappropriate use of research funding.</p> |  |  |

| <p>Label</p> | <p>How would you rate these student claims? Below are some claims that prior students offered as suppo... : How Typical is evidence for the claim?-At the nano-scale, materials change their properties: For example, elements that don't conduct electricity at normal scales may suddenly do so at the nano-level. See evidenceSupporting evidence?• A National Citizens' Technology Forum Report on Nanotechnology states that "A critically important aspect of manipulating matter at the nanoscale is that a material's properties can...exhibit new properties, such as electrical conductivity, elasticity, enhanced strength, different colors, and different reactivity, when compared to the same material at "normal" scale. This means...that using materials at the nanoscale can mean the creation of new materials that can be beneficial in many ways. It also means that we cannot assume that materials that are safe and harmless at normal scales are necessarily safe and harmless at the nanoscale."See source• Andrew Maynard, head of the University of Michigan Risk Science Center, offers an example: "Gold is an inert, yellowish metal—everyone knows this." He continues, "But form gold into particles just a few nanometers across, and everything changes—the metal does the equivalent of transforming from a cat into a dog. Instead of appearing yellowish in color, the particles now appear red, and become highly chemically active."See sourceNegating evidence?• None</p> |  |  |

| <p>Label</p> | <p>How would you rate these student claims? Below are some claims that prior students offered as suppo... : How Typical is evidence for the claim?- Slowing down nanogenomic research will cost zillions of lives as people waiting for this research will die of their genetic disorders. See evidence Supporting evidence?• "Among the long term objectives of the NIH initiative are goals such as being able to use nanoparticles to seek out cancer cells before tumors grow, remove and/ or replace "broken" parts of cells or cell mechanisms with miniature, molecular-sized biological "machines", and use similar "machines" as pumps or robots to deliver medicines when and where needed within the body. All of these ideas are feasible based on present technology." Subsequently, delaying this research is risking the lives of the people who could benefit from these treatments. See source• In 2005, a CNN article said that, "by attaching a chemotherapeutic drug to manmade nanoparticles, the team of researchers at the University of Michigan were able to smuggle it inside cancerous cells, delaying the growth of tumors in mice by up to 30 days -- the equivalent of three years in a human. Professor of biologic nanotechnology James Baker, who led the research, said that the treatment might eventually turn cancer into a chronic but treatable condition." See source• According to John Miller, a lawyer specializing in law and technology, "a lack of agency preparation could take the form of unnecessary delays</p> |  |  |

|                                 | in patient access. Inadequate resources combined with a growing caseload, an inefficient regulatory structure, a lack of expertise, or FDA reviewers exercising extreme caution could all result in the FDA taking excessive amounts of time to review new technologies."See sourceNegating evidence?• John Miller also points out that "If a lack of agency preparation results in hasty approval of dangerous therapies and a failure to effectively monitor clinical research, patients could be exposed to a significant risk of harm during clinical trials."See source• In the Australian and New Zealand Journal of Public Health, researchers wrote that the "regulatory regimes do not adequately capture the potential risks associated with this new technology. Concerns have arisen due to preliminary evidence suggesting that some engineered nanoparticles may display undesirable toxicological properties, presenting potential risks to human and environmental health and safety."See sourceDid you find additional evidence to support or negate this claim? |                                 | Label       | How would you rate these student claims? Below are some claims that prior students offered as suppo... : How Typical is evidence for the claim?- Nanogenomic technology is being used to diagnose (not just treat) diseases. See evidenceSupporting evidence?• According to the magazine New Scientist, Dr. Christine Keating and her colleagues at Pennsylvania State University have created a chip consisting of a series of nanowires coated with DNA sequences that match those from disease-causing bacteria or viruses that can be used to diagnose a variety of medical conditions. See source • A National Citizens' Technology Forum Report on Nanotechnology states that nanotechnology may lead to "dramatic diagnostic improvements", including using "nanoscale particles to dramatically enhance physicians' ability to detect very minute amounts of specific disease-related molecules in the body." See sourceNegating evidence?• None foundDid you find additional evidence to support or negate this claim? Please submit it below under "What's missing?" |       |         |

|   | Label       | How would you rate these student claims? Below are some claims that prior students offered as suppo... : How Relevant is the claim to the ANTI-Regulation perspective?- Nanogenomics could someday allow people to change any genetic characteristic (hair, skin, eye color) that they would like. See evidenceSupporting evidence?• Some note that such procedures are already being considered: "It's technically feasible and it can be done,' says Mark Hughes, a pioneer of the PGD process and director of Genesis Genetics Institute, a large fertility laboratory in Detroit. However, he adds that 'no legitimate lab would get into it and, if they did, they'd be ostracized.'" See source • Nanotechnology may simply be an additional tool for achieving such aims, as suggested by this author: "Nanorobots could change your physical appearance. They could be programmed to perform cosmetic surgery, rearranging your atoms to change your ears, nose, eye color or any other physical feature you wish to alter." See sourceNegating evidence?• At the end of the article referencing the potential of nanorobots above, the author states that, in general, "Many nanotechnology experts feel that these applications are well outside the realm of possibility, at least for the foreseeable future." | Label | <p>How would you rate these student claims? Below are some claims that prior students offered as suppo... : How Relevant is the claim to the ANTI-Regulation perspective?-People already use (and our laws allow them to use) medical technologies to change how they look (through plastic surgery) and even their gender--use of nanogenomics for human enhancement is basically the same thing. See evidenceSupporting evidence?• Dr. Gregor Wolbring reminds us that "the ever increasing appearance of internal and external enhancements of the human body – driven by lucrative and big business sport disciplines on one hand and the medical technology to deal with injuries on the other – enables a culture of increasing demand for, and acceptance of, improvements to and modifications of the human body (structure, function, abilities) beyond its species-typical boundaries." See source• With regard to the potential of nanotechnology to enhance humans, the President's Council on Bioethics said, "These technologies promise great benefits for humanity—such as increased productivity and creativity, longer lives, more serenity, stronger bodies and minds." See source• In 2000, David Resnick noted that scientists at a conference predicted that "within a few years researchers will develop techniques that can be used to enhance human traits." See sourceNegating evidence?• In light of recent developments in genetic research, scientists have been asked to make changes in things like</p> |  |

|                                 | skin color and muscle mass of patients. While this probably could be accomplished with current technology, Dr. Christopher Evans and Dr. Scott McIvor say, "the possibility of harm would be difficult to justify for a cosmetic procedure and, more important, genetic enhancement of healthy people raises a host of difficult ethical questions." See source• "The American Medical Association's Council on Ethical and Judicial Affairs issued a policy statement in 1994 stating that efforts to enhance "desirable" characteristics through the insertion of a modified or additional gene, or efforts to "improve" complex human traits, are contrary not only to the ethical tradition of medicine but also to the egalitarian values of our society." |                                 | Label              | How would you rate these student claims? Below are some claims that prior students offered as suppo... : How Relevant is the claim to the ANTI-Regulation perspective?- Nanogenomics differs from prior human enhancement technologies because it involves genetic changes that could be passed on to one's children. See evidenceSupporting evidence?• Scientists believe that every human has about 25,000 genes per cell. A mutation, or change, in any one of these genes can result in a disease, physical disability, or shortened life span. These mutations can be passed from one generation to another, inherited just like a mother's red hair or a father's brown eyes. Negating evidence?• David King of Human Genetics Alert says, "Currently, genetic engineering is only applied to non-reproductive cells (this is known as 'gene therapy') in order to treat diseases in a single patient, rather than in all their descendants. Gene therapy is still very unsuccessful, and we are often told that the prospect of reproductive genetic engineering is remote." See sourceDid you find additional evidence to support or negate this claim? Please submit it below under "What's missing?" |  |  |

| Label | <p>How would you rate these student claims? Below are some claims that prior students offered as suppo... : How Relevant is the claim to the ANTI-Regulation perspective?-When it comes to human enhancement, a "mistake" made using nanogenomic technology is much more serious than mistakes made using other technologies. See evidenceSupporting evidence?• An article by the Richmond Journal of Law and Technology reminds us that "[t]he extraordinarily small size of nanoproducts results in unusual properties that go beyond the normal law of physics, which makes working with them quite unpredictable." See source• A recent article in the Medical Journal of Australia states that "safety regulation of nanotherapeutics may present unique risk assessment challenges, given the novelty and variety of products, high mobility and reactivity of engineered nanoparticles, and blurring of the diagnostic and therapeutic classifications of "medicines" and "medical devices". See sourceNegating evidence?• The Law Journal of Medicine and Ethics ran an article in 2006 which stated, "risk often provokes the precautionary principle, a guide for human activities to prevent harm to human health and the environment. It is not a new principle and is often a formula for doing nothing in its strictest form or, in its active form it means choosing a less risky alternative and taking responsibility for any potential risks." That is to say, the risks of mistakes with nanotechnology are</p> |  |

| Label | <p>How would you rate these student claims? Below are some claims that prior students offered as suppo... : How Relevant is the claim to the ANTI-Regulation perspective?-Heavy regulation of nanogenomics will stifle and slow down research and development in nanogenomics. See evidence Supporting evidence?• In his 2007 paper, Patrick Lin looks at both sides of the issue: "On one side, experts argue that nanomaterials, which are making their way into the marketplace today, are possibly harmful to consumers and the environment, so stronger and new laws are needed to ensure they are safe. On the other side, different experts argue that more regulation will slow down the pace of business and innovation in nanotechnology." See source• Howard Schachman, Biology Professor at the University of California at Berkeley, posits that, "scientists temperamentally and culturally are skeptical about the legitimacy of rules; instinctively they tend to oppose regulations as an unnecessary burden impeding research." He adds that they "express frustration over those government regulations which are imposed as a result of political pressures, provide very little benefit, appear ill-advised or poorly crafted, are costly and do indeed impede scientific research." Negating evidence?• According to an Arizona State University study, "leading U.S. scientists in nanotechnology believe regulations are most urgently needed in the areas of surveillance and privacy, human</p> |  |  |

|                                 | enhancement, medicine and the environment."See source• Norris Alderson, who was on the FDA task force for nanomedicine says, "We reached a number of conclusions. Perhaps the most important is that, for now, this technology is really no different than any other new technology that would be incorporated into FDA products. So with that in mind, we feel comfortable, if you will, using our present regulatory framework. However, we felt there is need for guidance to help this industry as it moves forward. We recognized a need for additional information in various areas, such as biosafety. FDA and other agencies are working together on that. But for now, we just do not see the need for regulations written specifically for nano-engineered materials in the products FDA regulates."See sourceDid you find additional evidence to support or negate this claim? Please submit it below under "What's missing?" |            |    |      |

| Label | <p>How would you rate these student claims? Below are some claims that prior students offered as suppo... : How Relevant is the claim to the ANTI-Regulation perspective?-Heavy regulation will prevent the creative work that is necessary for life-saving breakthroughs. See evidence Supporting evidence?• Dr Patrick Lin, director of The Nanoethics Group says, "We need to find a reasonable balance that responsibly promotes innovation in nanotechnology while at the same time safeguards EHS [environmental health and safety] interests." See source• Eric Berger, science reporter for the Houston Chronicle, says "by finding areas in which nanotechnology may pose even a theoretical threat, they're also opening the door to more stringent regulation, which at some point may strangle the development of small, cash-strapped companies that are trying to commercialize innovative nano ideas." See source• According to a 2010 article on thescientist.com, "Biomedical science as it is practiced today in the United States in academic institutions is largely an enterprise, and a very large enterprise, supported with public funds from the national government. Due to the real risks for lapses in safety or ethics and the appropriate expectation for some form of accountability, research supported by money from the National Institutes of Health (NIH) or other federal sources is expected to comply with rules and regulations intended to minimize the chances for breaches in safety or ethics or</p> |  |  |

| Label | <p>How would you rate these student claims? Below are some claims that prior students offered as suppo... : How Relevant is the claim to the ANTI-Regulation perspective?-At the nano-scale, materials change their properties: For example, elements that don't conduct electricity at normal scales may suddenly do so at the nano-level. See evidenceSupporting evidence?• A National Citizens' Technology Forum Report on Nanotechnology states that "A critically important aspect of manipulating matter at the nanoscale is that a material's properties can...exhibit new properties, such as electrical conductivity, elasticity, enhanced strength, different colors, and different reactivity, when compared to the same material at "normal" scale. This means...that using materials at the nanoscale can mean the creation of new materials that can be beneficial in many ways. It also means that we cannot assume that materials that are safe and harmless at normal scales are necessarily safe and harmless at the nanoscale."See source• Andrew Maynard, head of the University of Michigan Risk Science Center, offers an example: "Gold is an inert, yellowish metal—everyone knows this." He continues, "But form gold into particles just a few nanometers across, and everything changes—the metal does the equivalent of transforming from a cat into a dog. Instead of appearing yellowish in color, the particles now appear red, and become highly chemically active."See</p> |  |  |

| <p>Label</p> | <p>How would you rate these student claims? Below are some claims that prior students offered as suppo... : How Relevant is the claim to the ANTI-Regulation perspective?- Nanogenomics will someday let people choose the genetic make up of their children. See evidenceSupporting evidence?• As Jeff Steinberg of LA's Fertility Institutes says, "This is cosmetic medicine...Others are frightened by the criticism but we have no problems with it." Trait selection in babies "is a service," says Dr. Steinberg, and "[w]e intend to offer it soon." See source• Stanford University's Cross-cultural Rhetoric Project acknowledges that "PGD (Preimplantation Genetic Diagnosis) has been used to create 'Designer Babies'. 'Designer baby' is a term used to refer to a baby whose genetic makeup has been artificially selected by genetic engineering. The procedure used to create these genetically modified babies ensures the presence or absence of particular genes or characteristics." See sourceNegating evidence?• Geneticist and blogger, Minerva reminds us that "the opportunity to alter a relatively "simple" trait such as height will be available long before we figure out the soup of probable genetic determinants of "empathy", so physical trait enhancement will surely precede character trait enhancement." See source• According to a 2009 Science Daily article, "A new study by researchers at NYU Langone Medical Center found a high desire for additional genetic testing among consumers for life</p> |  |  |

| <p>Label</p> | <p>How would you rate these student claims? Below are some claims that prior students offered as suppo... : How Relevant is the claim to the ANTI-Regulation perspective?-Slowing down nanogenomic research will cost zillions of lives as people waiting for this research will die of their genetic disorders. See evidenceSupporting evidence?• "Among the long term objectives of the NIH initiative are goals such as being able to use nanoparticles to seek out cancer cells before tumors grow, remove and/ or replace "broken" parts of cells or cell mechanisms with miniature, molecular-sized biological "machines", and use similar "machines" as pumps or robots to deliver medicines when and where needed within the body. All of these ideas are feasible based on present technology." Subsequently, delaying this research is risking the lives of the people who could benefit from these treatments. See source• In 2005, a CNN article said that, "by attaching a chemotherapeutic drug to manmade nanoparticles, the team of researchers at the University of Michigan were able to smuggle it inside cancerous cells, delaying the growth of tumors in mice by up to 30 days -- the equivalent of three years in a human. Professor of biologic nanotechnology James Baker, who led the research, said that the treatment might eventually turn cancer into a chronic but treatable condition." See source• According to John Miller, a lawyer specializing in law and technology, "a lack of agency preparation could take the form of</p> |  |  |

|                                 | unnecessary delays in patient access. Inadequate resources combined with a growing caseload, an inefficient regulatory structure, a lack of expertise, or FDA reviewers exercising extreme caution could all result in the FDA taking excessive amounts of time to review new technologies."See sourceNegating evidence?• John Miller also points out that "If a lack of agency preparation results in hasty approval of dangerous therapies and a failure to effectively monitor clinical research, patients could be exposed to a significant risk of harm during clinical trials."See source• In the Australian and New Zealand Journal of Public Health, researchers wrote that the "regulatory regimes do not adequately capture the potential risks associated with this new technology. Concerns have arisen due to preliminary evidence suggesting that some engineered nanoparticles may display undesirable toxicological properties, presenting potential risks to human and environmental health and safety."See sourceDid you find additional evidence to support or negate this claim? |                     | Label       | How would you rate these student claims? Below are some claims that prior students offered as suppo... : How Relevant is the claim to the ANTI-Regulation perspective?- Nanogenomic technology is being used to diagnose (not just treat) diseases. See evidenceSupporting evidence?• According to the magazine New Scientist, Dr. Christine Keating and her colleagues at Pennsylvania State University have created a chip consisting of a series of nanowires coated with DNA sequences that match those from disease-causing bacteria or viruses that can be used to diagnose a variety of medical conditions. See source • A National Citizens' Technology Forum Report on Nanotechnology states that nanotechnology may lead to "dramatic diagnostic improvements", including using "nanoscale particles to dramatically enhance physicians' ability to detect very minute amounts of specific disease-related molecules in the body." |                                 | Label       | How would you organize these student claims? Below are some claims that prior students offered as s... : Which perspective does this claim support?- Nanogenomics could someday allow people to change any genetic characteristic (hair, skin, eye color) that they would like. See evidenceSupporting evidence?• Some note that such procedures are already being considered: "It's technically feasible and it can be done," says Mark Hughes, a pioneer of the PGD process and director of Genesis Genetics Institute, a large fertility laboratory in Detroit. However, he adds that 'no legitimate lab would get into it and, if they did, they'd be ostracized.'" See source • Nanotechnology may simply be an additional tool for achieving such aims, as suggested by this author: "Nanorobots could change your physical appearance. They could be programmed to perform cosmetic surgery, rearranging your atoms to change your ears, nose, eye color or any other physical feature you wish to alter." See sourceNegating evidence?• At the end of the article referencing the potential of nanorobots above, the author states that, in general, "Many nanotechnology experts feel that these applications are well outside the realm of possibility, at least for the foreseeable future." | <p>Label</p> | <p>How would you organize these student claims? Below are some claims that prior students offered as s... : Which perspective does this claim support? People already use (and our laws allow them to use) medical technologies to change how they look (through plastic surgery) and even their gender--use of nanogenomics for human enhancement is basically the same thing. See evidence Supporting evidence? • Dr. Gregor Wolbring reminds us that "the ever increasing appearance of internal and external enhancements of the human body – driven by lucrative and big business sport disciplines on one hand and the medical technology to deal with injuries on the other – enables a culture of increasing demand for, and acceptance of, improvements to and modifications of the human body (structure, function, abilities) beyond its species-typical boundaries." See source • With regard to the potential of nanotechnology to enhance humans, the President's Council on Bioethics said, "These technologies promise great benefits for humanity—such as increased productivity and creativity, longer lives, more serenity, stronger bodies and minds." See source • In 2000, David Resnick noted that scientists at a conference predicted that "within a few years researchers will develop techniques that can be used to enhance human traits." See source Negating evidence? • In light of recent developments in genetic research, scientists have been asked to make changes in things like skin color and muscle</p> |  |  |

|                                 |                    | mass of patients. While this probably could be accomplished with current technology, Dr. Christopher Evans and Dr. Scott McIvor say, "the possibility of harm would be difficult to justify for a cosmetic procedure and, more important, genetic enhancement of healthy people raises a host of difficult ethical questions."See source• "The American Medical Association's Council on Ethical and Judicial Affairs issued a policy statement in 1994 stating that efforts to enhance "desirable" characteristics through the insertion of a modified or additional gene, or efforts to "improve" complex human traits, are contrary not only to the ethical tradition of medicine but also to the egalitarian values of our society."See sourceDid you find additional evidence to support or negate this claim? |                                 | Label              | How would you organize these student claims? Below are some claims that prior students offered as s... : Which perspective does this claim support?- Nanogenomics differs from prior human enhancement technologies because it involves genetic changes that could be passed on to one's children. See evidence. Supporting evidence? • Scientists believe that every human has about 25,000 genes per cell. A mutation, or change, in any one of these genes can result in a disease, physical disability, or shortened life span. These mutations can be passed from one generation to another, inherited just like a mother's red hair or a father's brown eyes. Negating evidence? • David King of Human Genetics Alert says, "Currently, genetic engineering is only applied to non-reproductive cells (this is known as 'gene therapy') in order to treat diseases in a single patient, rather than in all their descendants. Gene therapy is still very unsuccessful, and we are often told that the prospect of reproductive genetic engineering is remote." See source. Did you find additional evidence to support or negate this claim? Please submit it below under "What's missing?" |  |  |

| <p>Label</p> | <p>How would you organize these student claims? Below are some claims that prior students offered as s... : Which perspective does this claim support?-When it comes to human enhancement, a "mistake" made using nanogenomic technology is much more serious than mistakes made using other technologies. See evidenceSupporting evidence?• An article by the Richmond Journal of Law and Technology reminds us that "[t]he extraordinarily small size of nanoproducts results in unusual properties that go beyond the normal law of physics, which makes working with them quite unpredictable." See source• A recent article in the Medical Journal of Australia states that "safety regulation of nanotherapeutics may present unique risk assessment challenges, given the novelty and variety of products, high mobility and reactivity of engineered nanoparticles, and blurring of the diagnostic and therapeutic classifications of "medicines" and "medical devices"." See sourceNegating evidence?• The Law Journal of Medicine and Ethics ran an article in 2006 which stated, "risk often provokes the precautionary principle, a guide for human activities to prevent harm to human health and the environment. It is not a new principle and is often a formula for doing nothing in its strictest form or, in its active form it means choosing a less risky alternative and taking responsibility for any potential risks." That is to say, the risks of mistakes with nanotechnology are no different than the</p> |  |  |

| <p>Label</p> | <p>How would you organize these student claims? Below are some claims that prior students offered as s... : Which perspective does this claim support?-Heavy regulation of nanogenomics will stifle and slow down research and development in nanogenomics. See evidenceSupporting evidence?• In his 2007 paper, Patrick Lin looks at both sides of the issue: "On one side, experts argue that nanomaterials, which are making their way into the marketplace today, are possibly harmful to consumers and the environment, so stronger and new laws are needed to ensure they are safe. On the other side, different experts argue that more regulation will slow down the pace of business and innovation in nanotechnology." See source• Howard Schachman, Biology Professor at the University of California at Berkeley, posits that, "scientists temperamentally and culturally are skeptical about the legitimacy of rules; instinctively they tend to oppose regulations as an unnecessary burden impeding research." He adds that they "express frustration over those government regulations which are imposed as a result of political pressures, provide very little benefit, appear ill-advised or poorly crafted, are costly and do indeed impede scientific research." Negating evidence?• According to an Arizona State University study, "leading U.S. scientists in nanotechnology believe regulations are most urgently needed in the areas of surveillance and privacy, human enhancement,</p> |  |  |

|                                 |                    | medicine and the environment."See source• Norris Alderson, who was on the FDA task force for nanomedicine says, "We reached a number of conclusions. Perhaps the most important is that, for now, this technology is really no different than any other new technology that would be incorporated into FDA products. So with that in mind, we feel comfortable, if you will, using our present regulatory framework. However, we felt there is need for guidance to help this industry as it moves forward. We recognized a need for additional information in various areas, such as biosafety. FDA and other agencies are working together on that. But for now, we just do not see the need for regulations written specifically for nano-engineered materials in the products FDA regulates."See sourceDid you find additional evidence to support or negate this claim? | <p>Label</p> | <p>How would you organize these student claims? Below are some claims that prior students offered as s... : Which perspective does this claim support?-Heavy regulation will prevent the creative work that is necessary for life-saving breakthroughs. See evidenceSupporting evidence?• Dr Patrick Lin, director of The Nanoethics Group says, "We need to find a reasonable balance that responsibly promotes innovation in nanotechnology while at the same time safeguards EHS [environmental health and safety] interests."See source• Eric Berger, science reporter for the Houston Chronicle, says "by finding areas in which nanotechnology may pose even a theoretical threat, they're also opening the door to more stringent regulation, which at some point may strangle the development of small, cash-strapped companies that are trying to commercialize innovative nano ideas."See source• According to a 2010 article on thescientist.com, "Biomedical science as it is practiced today in the United States in academic institutions is largely an enterprise, and a very large enterprise, supported with public funds from the national government. Due to the real risks for lapses in safety or ethics and the appropriate expectation for some form of accountability, research supported by money from the National Institutes of Health (NIH) or other federal sources is expected to comply with rules and regulations intended to minimize the chances for breaches in safety or ethics or for inappropriate use</p> |  |  |

| Label | <p>How would you organize these student claims? Below are some claims that prior students offered as s... : Which perspective does this claim support?-At the nano-scale, materials change their properties: For example, elements that don't conduct electricity at normal scales may suddenly do so at the nano-level. See evidenceSupporting evidence?• A National Citizens' Technology Forum Report on Nanotechnology states that "A critically important aspect of manipulating matter at the nanoscale is that a material's properties can...exhibit new properties, such as electrical conductivity, elasticity, enhanced strength, different colors, and different reactivity, when compared to the same material at "normal" scale. This means...that using materials at the nanoscale can mean the creation of new materials that can be beneficial in many ways. It also means that we cannot assume that materials that are safe and harmless at normal scales are necessarily safe and harmless at the nanoscale."See source• Andrew Maynard, head of the University of Michigan Risk Science Center, offers an example: "Gold is an inert, yellowish metal—everyone knows this." He continues, "But form gold into particles just a few nanometers across, and everything changes—the metal does the equivalent of transforming from a cat into a dog. Instead of appearing yellowish in color, the particles now appear red, and become highly chemically active."See sourceNegating</p> |  |  |

| Label | <p>How would you organize these student claims? Below are some claims that prior students offered as s... : Which perspective does this claim support?- Nanogenomics will someday let people choose the genetic make up of their children. See evidence Supporting evidence? • As Jeff Steinberg of LA's Fertility Institutes says, "This is cosmetic medicine... Others are frightened by the criticism but we have no problems with it." Trait selection in babies "is a service," says Dr. Steinberg, and "[w]e intend to offer it soon." See source • Stanford University's Cross-cultural Rhetoric Project acknowledges that "PGD (Preimplantation Genetic Diagnosis) has been used to create 'Designer Babies'. 'Designer baby' is a term used to refer to a baby whose genetic makeup has been artificially selected by genetic engineering. The procedure used to create these genetically modified babies ensures the presence or absence of particular genes or characteristics." See source Negating evidence? • Geneticist and blogger, Minerva reminds us that "the opportunity to alter a relatively "simple" trait such as height will be available long before we figure out the soup of probable genetic determinants of "empathy", so physical trait enhancement will surely precede character trait enhancement." See source • According to a 2009 Science Daily article, "A new study by researchers at NYU Langone Medical Center found a high desire for additional genetic testing among consumers for life altering and</p> |  |  |

| <p>Label</p> | <p>How would you organize these student claims? Below are some claims that prior students offered as s... : Which perspective does this claim support?- Slowing down nanogenomic research will cost zillions of lives as people waiting for this research will die of their genetic disorders. See evidence Supporting evidence? • "Among the long term objectives of the NIH initiative are goals such as being able to use nanoparticles to seek out cancer cells before tumors grow, remove and/ or replace "broken" parts of cells or cell mechanisms with miniature, molecular-sized biological "machines", and use similar "machines" as pumps or robots to deliver medicines when and where needed within the body. All of these ideas are feasible based on present technology." Subsequently, delaying this research is risking the lives of the people who could benefit from these treatments. See source • In 2005, a CNN article said that, "by attaching a chemotherapeutic drug to manmade nanoparticles, the team of researchers at the University of Michigan were able to smuggle it inside cancerous cells, delaying the growth of tumors in mice by up to 30 days -- the equivalent of three years in a human. Professor of biologic nanotechnology James Baker, who led the research, said that the treatment might eventually turn cancer into a chronic but treatable condition." See source • According to John Miller, a lawyer specializing in law and technology, "a lack of agency preparation could take the form of</p> |  |  |

|                                 | unnecessary delays in patient access. Inadequate resources combined with a growing caseload, an inefficient regulatory structure, a lack of expertise, or FDA reviewers exercising extreme caution could all result in the FDA taking excessive amounts of time to review new technologies."See sourceNegating evidence?• John Miller also points out that "If a lack of agency preparation results in hasty approval of dangerous therapies and a failure to effectively monitor clinical research, patients could be exposed to a significant risk of harm during clinical trials."See source• In the Australian and New Zealand Journal of Public Health, researchers wrote that the "regulatory regimes do not adequately capture the potential risks associated with this new technology. Concerns have arisen due to preliminary evidence suggesting that some engineered nanoparticles may display undesirable toxicological properties, presenting potential risks to human and environmental health and safety."See sourceDid you find additional evidence to support or negate this claim? Please submit it below under "What's missing?" |                 |   |      |

|                     | Label       | How would you organize these student claims? Below are some claims that prior students offered as s... : Which perspective does this claim support?- Nanogenomic technology is being used to diagnose (not just treat) diseases. See evidenceSupporting evidence?• According to the magazine New Scientist, Dr. Christine Keating and her colleagues at Pennsylvania State University have created a chip consisting of a series of nanowires coated with DNA sequences that match those from disease-causing bacteria or viruses that can be used to diagnose a variety of medical conditions. See source • A National Citizens' Technology Forum Report on Nanotechnology states that nanotechnology may lead to "dramatic diagnostic improvements", including using "nanoscale particles to dramatically enhance physicians' ability to detect very minute amounts of specific disease-related molecules in the body." See sourceNegating evidence?• None foundDid you find additional evidence to support or negate this claim? Please submit it below under "What's missing?" |       |         |

|   | Label       | How would you organize these student claims? Below are some claims that prior students offered as s... : Would the PRO and ANTI regulation perspectives agree or disagree with this claim?- Nanogenomics could someday allow people to change any genetic characteristic (hair, skin, eye color) that they would like. See evidenceSupporting evidence?• Some note that such procedures are already being considered: "It's technically feasible and it can be done," says Mark Hughes, a pioneer of the PGD process and director of Genesis Genetics Institute, a large fertility laboratory in Detroit. However, he adds that 'no legitimate lab would get into it and, if they did, they'd be ostracized.'" See source • Nanotechnology may simply be an additional tool for achieving such aims, as suggested by this author: "Nanorobots could change your physical appearance. They could be programmed to perform cosmetic surgery, rearranging your atoms to change your ears, nose, eye color or any other physical feature you wish to alter." See sourceNegating evidence?• At the end of the article referencing the potential of nanorobots above, the author states that, in general, "Many nanotechnology experts feel that these applications are well outside the realm of possibility, at least for the foreseeable future." | <p>Label</p> | <p>How would you organize these student claims? Below are some claims that prior students offered as s... : Would the PRO and ANTI regulation perspectives agree or disagree with this claim?-People already use (and our laws allow them to use) medical technologies to change how they look (through plastic surgery) and even their gender--use of nanogenomics for human enhancement is basically the same thing. See evidenceSupporting evidence?• Dr. Gregor Wolbring reminds us that "the ever increasing appearance of internal and external enhancements of the human body – driven by lucrative and big business sport disciplines on one hand and the medical technology to deal with injuries on the other – enables a culture of increasing demand for, and acceptance of, improvements to and modifications of the human body (structure, function, abilities) beyond its species-typical boundaries." See source• With regard to the potential of nanotechnology to enhance humans, the President's Council on Bioethics said, "These technologies promise great benefits for humanity—such as increased productivity and creativity, longer lives, more serenity, stronger bodies and minds." See source• In 2000, David Resnick noted that scientists at a conference predicted that "within a few years researchers will develop techniques that can be used to enhance human traits." See sourceNegating evidence?• In light of recent developments in genetic research, scientists have been asked to make</p> |  |  |

|                                 | Label       | How would you organize these student claims? Below are some claims that prior students offered as s... : Would the PRO and ANTI regulation perspectives agree or disagree with this claim?- Nanogenomics differs from prior human enhancement technologies because it involves genetic changes that could be passed on to one's children. See evidenceSupporting evidence?• Scientists believe that every human has about 25,000 genes per cell. A mutation, or change, in any one of these genes can result in a disease, physical disability, or shortened life span. These mutations can be passed from one generation to another, inherited just like a mother's red hair or a father's brown eyes.Negating evidence?• David King of Human Genetics Alert says, "Currently, genetic engineering is only applied to non-reproductive cells (this is known as 'gene therapy') in order to treat diseases in a single patient, rather than in all their descendants. Gene therapy is still very unsuccessful, and we are often told that the prospect of reproductive genetic engineering is remote."See sourceDid you find additional evidence to support or negate this claim? Please submit it below under "What's missing?" |       |         |

| <p>Label</p> | <p>How would you organize these student claims? Below are some claims that prior students offered as s... : Would the PRO and ANTI regulation perspectives agree or disagree with this claim?-When it comes to human enhancement, a "mistake" made using nanogenomic technology is much more serious than mistakes made using other technologies. See evidenceSupporting evidence?• An article by the Richmond Journal of Law and Technology reminds us that "[t]he extraordinarily small size of nanoproducts results in unusual properties that go beyond the normal law of physics, which makes working with them quite unpredictable." See source• A recent article in the Medical Journal of Australia states that "safety regulation of nanotherapeutics may present unique risk assessment challenges, given the novelty and variety of products, high mobility and reactivity of engineered nanoparticles, and blurring of the diagnostic and therapeutic classifications of "medicines" and "medical devices". See sourceNegating evidence?• The Law Journal of Medicine and Ethics ran an article in 2006 which stated, "risk often provokes the precautionary principle, a guide for human activities to prevent harm to human health and the environment. It is not a new principle and is often a formula for doing nothing in its strictest form or, in its active form it means choosing a less risky alternative and taking responsibility for any potential risks." That is to say, the risks of mistakes with</p> |  |  |

| <p>Label</p> | <p>How would you organize these student claims? Below are some claims that prior students offered as s... : Would the PRO and ANTI regulation perspectives agree or disagree with this claim?-Heavy regulation of nanogenomics will stifle and slow down research and development in nanogenomics. See evidenceSupporting evidence?• In his 2007 paper, Patrick Lin looks at both sides of the issue: "On one side, experts argue that nanomaterials, which are making their way into the marketplace today, are possibly harmful to consumers and the environment, so stronger and new laws are needed to ensure they are safe. On the other side, different experts argue that more regulation will slow down the pace of business and innovation in nanotechnology." See source• Howard Schachman, Biology Professor at the University of California at Berkeley, posits that, "scientists temperamentally and culturally are skeptical about the legitimacy of rules; instinctively they tend to oppose regulations as an unnecessary burden impeding research." He adds that they "express frustration over those government regulations which are imposed as a result of political pressures, provide very little benefit, appear ill-advised or poorly crafted, are costly and do indeed impede scientific research." Negating evidence?• According to an Arizona State University study, "leading U.S. scientists in nanotechnology believe regulations are most urgently needed in the areas of surveillance and</p> |  |  |

|                                 |                    | privacy, human enhancement, medicine and the environment."See source• Norris Alderson, who was on the FDA task force for nanomedicine says, "We reached a number of conclusions. Perhaps the most important is that, for now, this technology is really no different than any other new technology that would be incorporated into FDA products. So with that in mind, we feel comfortable, if you will, using our present regulatory framework. However, we felt there is need for guidance to help this industry as it moves forward. We recognized a need for additional information in various areas, such as biosafety. FDA and other agencies are working together on that. But for now, we just do not see the need for regulations written specifically for nano-engineered materials in the products FDA regulates."See sourceDid you find additional evidence to support or negate this claim? | <p>Label</p> | <p>How would you organize these student claims? Below are some claims that prior students offered as s... : Would the PRO and ANTI regulation perspectives agree or disagree with this claim?-Heavy regulation will prevent the creative work that is necessary for life-saving breakthroughs. See evidence Supporting evidence?• Dr Patrick Lin, director of The Nanoethics Group says, "We need to find a reasonable balance that responsibly promotes innovation in nanotechnology while at the same time safeguards EHS [environmental health and safety] interests." See source• Eric Berger, science reporter for the Houston Chronicle, says "by finding areas in which nanotechnology may pose even a theoretical threat, they're also opening the door to more stringent regulation, which at some point may strangle the development of small, cash-strapped companies that are trying to commercialize innovative nano ideas." See source• According to a 2010 article on thescientist.com, "Biomedical science as it is practiced today in the United States in academic institutions is largely an enterprise, and a very large enterprise, supported with public funds from the national government. Due to the real risks for lapses in safety or ethics and the appropriate expectation for some form of accountability, research supported by money from the National Institutes of Health (NIH) or other federal sources is expected to comply with rules and regulations intended to minimize the chances for breaches</p> |  |  |

| Label | <p>How would you organize these student claims? Below are some claims that prior students offered as s... : Would the PRO and ANTI regulation perspectives agree or disagree with this claim?-At the nano-scale, materials change their properties: For example, elements that don't conduct electricity at normal scales may suddenly do so at the nano-level. See evidenceSupporting evidence?• A National Citizens' Technology Forum Report on Nanotechnology states that "A critically important aspect of manipulating matter at the nanoscale is that a material's properties can...exhibit new properties, such as electrical conductivity, elasticity, enhanced strength, different colors, and different reactivity, when compared to the same material at "normal" scale. This means...that using materials at the nanoscale can mean the creation of new materials that can be beneficial in many ways. It also means that we cannot assume that materials that are safe and harmless at normal scales are necessarily safe and harmless at the nanoscale."See source• Andrew Maynard, head of the University of Michigan Risk Science Center, offers an example: "Gold is an inert, yellowish metal—everyone knows this." He continues, "But form gold into particles just a few nanometers across, and everything changes—the metal does the equivalent of transforming from a cat into a dog. Instead of appearing yellowish in color, the particles now appear red, and become highly chemically</p> |  |  |

| <p>Label</p> | <p>How would you organize these student claims? Below are some claims that prior students offered as s... : Would the PRO and ANTI regulation perspectives agree or disagree with this claim?-Slowing down nanogenomic research will cost zillions of lives as people waiting for this research will die of their genetic disorders. See evidence Supporting evidence?• "Among the long term objectives of the NIH initiative are goals such as being able to use nanoparticles to seek out cancer cells before tumors grow, remove and/ or replace "broken" parts of cells or cell mechanisms with miniature, molecular-sized biological "machines", and use similar "machines" as pumps or robots to deliver medicines when and where needed within the body. All of these ideas are feasible based on present technology." Subsequently, delaying this research is risking the lives of the people who could benefit from these treatments. See source• In 2005, a CNN article said that, "by attaching a chemotherapeutic drug to manmade nanoparticles, the team of researchers at the University of Michigan were able to smuggle it inside cancerous cells, delaying the growth of tumors in mice by up to 30 days -- the equivalent of three years in a human. Professor of biologic nanotechnology James Baker, who led the research, said that the treatment might eventually turn cancer into a chronic but treatable condition." See source• According to John Miller, a lawyer specializing in law and technology, "a lack of agency preparation could</p> |  |  |

|                                 |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |         |  |  |
|---------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|--|--|
|                                 | <p>take the form of unnecessary delays in patient access. Inadequate resources combined with a growing caseload, an inefficient regulatory structure, a lack of expertise, or FDA reviewers exercising extreme caution could all result in the FDA taking excessive amounts of time to review new technologies."See sourceNegating evidence?• John Miller also points out that "If a lack of agency preparation results in hasty approval of dangerous therapies and a failure to effectively monitor clinical research, patients could be exposed to a significant risk of harm during clinical trials."See source• In the Australian and New Zealand Journal of Public Health, researchers wrote that the "regulatory regimes do not adequately capture the potential risks associated with this new technology. Concerns have arisen due to preliminary evidence suggesting that some engineered nanoparticles may display undesirable toxicological properties, presenting potential risks to human and environmental health and safety."See sourceDid you find additional evidence to support or negate this claim? |                     | Label    | <p>How would you organize these student claims? Below are some claims that prior students offered as s... : Would the PRO and ANTI regulation perspectives agree or disagree with this claim?-Nanogenomic technology is being used to diagnose (not just treat) diseases. See evidenceSupporting evidence?• According to the magazine New Scientist, Dr. Christine Keating and her colleagues at Pennsylvania State University have created a chip consisting of a series of nanowires coated with DNA sequences that match those from disease-causing bacteria or viruses that can be used to diagnose a variety of medical conditions. See source • A National Citizens' Technology Forum Report on Nanotechnology states that nanotechnology may lead to "dramatic diagnostic improvements", including using "nanoscale particles to dramatically enhance physicians' ability to detect very minute amounts of specific disease-related molecules in the body." | all but some of them i couldnt give my full opinion on...                                |             |                                                                                                                  | 1   | 0.5%  |
| All except the questions about how I felt about the survey.                              |             |                                                                                                                  | 1   | 0.5%  |
| I felt like i did a little bit of both just answering them, and honestly answering them. |             |                                                                                                                  | 1   | 0.5%  |
| I tried harder on the questions in the beginning. Overall I gave a pretty good effort.   |             |                                                                                                                  | 1   | 0.5%  |
